1.1 Important Information

UPS Developer APIs

Your development of an application using the UPS Web Service APIs are governed by the UPS Technology Agreement or UPS Customer Technology Agreement you entered into with UPS. The following are key legal requirements from these agreements for the UPS Web Service APIs. For more information on all requirements for the UPS Web Service APIs, please refer to the UPS Technology Agreement or the Customer Technology Agreement.

Key Legal Requirements for UPS Developer APIs

Permitted Territories

This document can only be used in the countries listed in Exhibit C of the UPS Technology Agreement or UPS Customer Technology Agreement.

Use

The application must not be designed to allow distribution of information received through the UPS Web Service APIs to third parties, other than to persons having a bona fide interest in such information (e.g., the shipper, receiver or the third party payer).

Consent to Use of UPS Mark

- All screens or forms generated by your application including information received through the UPS Web Service APIs must include (1) the UPS Mark positioned in reasonable proximity to the Information and of an appropriate size to readily identify the source of the Information as UPS and (2) the following language at the bottom of every screen that displays the UPS Mark: "UPS, the UPS brand mark, and the Color Brown are trademarks of United Parcel Service of America, Inc. All Rights Reserved". Except as set forth in the preceding sentence, you have no right to use the UPS Mark without the prior written approval of UPS.
- You shall not use the UPS Mark in association with any third party trademarks in a manner that might suggest co-branding or otherwise create potential confusion as to source or sponsorship of the application, or ownership of the UPS Mark.
- The UPS Mark shall be used only as provided by UPS electronically or in hard copy form. The UPS Mark may not be altered in any manner, including proportions, colors, elements, etc., or animated, morphed or otherwise distorted in perspective or dimensional appearance.
- The UPS Mark may not be combined with any other symbols, including words, logos, icons, graphics, photos, slogans, numbers or other design elements. A minimum amount of empty space must surround the UPS Mark separating it from any other object, such as type, photography, borders, edges, etc. The required area of empty space around the UPS Mark must be $1/3x$, where x equals the height of the UPS Mark.

Copyright and Proprietary Notice

In your application and any POD Letters you prepare you must include a prominent reproduction of UPS's copyright and proprietary notices in a form and format specified by UPS (See Copyright Section of this document).

Display of Information

The application must not display information concerning any other provider of shipping services or such other shipping services on any page, whether comprising one or more frames, displaying information your application receives from the UPS Web Service APIs. Your application must present all data within each field received through the UPS Web Service APIs without amendment, deletion or modification of any type.

1.2 Welcome to the UPS API Developer's Guides

Welcome to the UPS API Developer's Guides. This guide provides the information you need to begin using UPS Developer APIs.

UPS Developer APIs offer a fast and convenient way to access UPS service information using the Internet. With these Developer APIs, UPS lets you easily incorporate UPS technology in your own applications or your own web site. Your users—running your applications or visiting your web site—can have up-to-the-minute access to UPS services.

1.2.1 Release features

Release	New Features
Jan. 2013	<p>UPS Worldwide Express Freight</p> <ul style="list-style-type: none"> • New guaranteed service is a general service offering that accepts palletized international air freight shipments within UPS's package and freight networks • The service is a small package initiative that accepts palletized shipments • All origins and destinations supported by Worldwide Express Freight service <p><u>Shipping API Impact</u></p> <ul style="list-style-type: none"> • New functionality to support UPS Worldwide Express Freight • Shipping XML & SWS new tag for the <code></ShipmentConfirmRequest/Shipment></code> and <code></ShipmentRequest/Shipment/></code> respectively is <ul style="list-style-type: none"> – NumOfPiecesInShipment • Shipping XML & SWS new tags for the <code></ShipmentConfirmRequest/Shipment/ShipmentServiceOptions/></code> and <code></ShipmentRequest/Shipment/ShipmentServiceOptions/></code> respectively are <ul style="list-style-type: none"> – HoldForPickupIndicator – DropoffAtUPSFacilityIndicator – LiftGateForPickUpIndicator

Release	New Features
	<ul style="list-style-type: none"> – LiftGateForDeliveryIndicator <p>Dimensional Weight Enhancements</p> <ul style="list-style-type: none"> • Retain customers supplied dimensions and scale wt in the billing process • Utilize customers supplied dimensions and scale wt to calculate Additional Handling Charge/Large Package Surcharge (AHC/LPS) <ul style="list-style-type: none"> – Irregularly shaped packages must still include the <AdditionalHandlingCharge> indicator for Rating API and <AdditionalHandling> indicator Shipping API • Link UPS scanned dimensions to a package / shipment billing information - UPS scanned dimensions are reflected only when used for a correction • Reflected customer supplied dimensions on the invoice • NOTE: LPS takes precedence over AHC and LPS and AHC cannot be used together on the same package • <NegotiatedRates> container will now return rates with dimensional weight divisor and CWT Tiers applied <p>Expedited Expansion</p> <p>Expand Expedited Service to/from all countries where WW Express Saver is available today</p> <p>International Rate, Zone, Service Enhancements</p> <ul style="list-style-type: none"> – Support Saturday Delivery destinations in Asia Pac: Australia (AU), Taiwan (TW), Malaysia (MY), and New Zealand (NZ) – Support Declared Value (DV) as valid from Vietnam (VN) – Support Domestic Express Saver in Portugal (PT) – Support Domestic Standard service US 48 to Mexico as a general service offering <p><u>Shipping API Impact</u></p> <ul style="list-style-type: none"> – Expand the supported Origin and Return Countries <p>International Trade Tool Enhancement</p> <ul style="list-style-type: none"> • Simplify international forms processing by enhancing the existing international forms offering • Expand document determination capabilities and create an intuitive, comprehensive, easy-to-use document library • Add new functionality that will give customers several options to complete their international trade documentation: <ul style="list-style-type: none"> – Ability for an user with an enrolled account to upload brokerage forms the user generates outside of the Shipping API process. Supported file formats are

Release	New Features
	<p>converted to PDF files and linked to the shipment.</p> <ul style="list-style-type: none"> – Packing List small package shipments for International Shippers <ul style="list-style-type: none"> • Paperless Packing List for same countries that have paperless commercial invoice – Commercial invoice is required in order to have paperless Packing List • Paper Packing List allowed for all deployment countries • Limit of 20 packages and 50 products <p><u>Shipping API Impact</u></p> <ul style="list-style-type: none"> • Support additional paperless documentation (new tags): <ul style="list-style-type: none"> • PackingListInfo <pre> <PackageAssociated> <PackageNumber>01</PackageNumber> <ProductAmount>2</ProductAmount> </PackageAssociated> <PackageAssociated> <PackageNumber>02</PackageNumber> <ProductAmount>3</ProductAmount> </PackageAssociated> </PackingListInfo> </pre> • User Created Forms <pre> /ShipmentConfirmRequest/Documents/InternationalForms/UserCreatedForm /ShipmentConfirmRequest/Shipment/Documents/InternationalForms/UserCreatedForm/DocumentID </pre> <p><u>Paperless Document API</u></p> <ul style="list-style-type: none"> • New API created to be used with the Shipping API's to allow users to upload forms generated outside. <ul style="list-style-type: none"> – Can be used to delete previous uploaded documents – May be used in conjunction with UPS WorldShip and UPSLink Vendors <p>Technical Support Email Template Improvements</p> <ul style="list-style-type: none"> • Optionally collect the customer's UPS Account Number, User ID and Access Key • Capture if UPS Ready Provider (Y/N); Default field selection to "N" • Update email application content on what the types of attachment is not allowed (EXE) for a logged-in user. • Include the Stage of Development (Pre-Integration, Integration, Post-Integration) in the email subject line (end of existing text); make Stage of Development a mandatory field. • Under Attach File inform the requester that XML Request and Response files should be included whenever possible.

Release	New Features
	<p>New Negotiated Rates Authentication Rules</p> <ul style="list-style-type: none"> As of October 2012, customers who have not generated an invoice within 90 days or have never generated an invoice can contact their UPS sales person to enable negotiated rates via the Shipping and Rating APIs. Customers who have generated an invoice within the past 90 days must use Account Invoice Authentication which requires invoice data to add an account to the myUPS Account Summary at ups.com. There is no exception or work-around for this process. Additionally, three failed attempts to authenticate will lock out the UPS Account for 24 hours for that myUPS ID. <p>UPS Developer Kit Community</p> <ul style="list-style-type: none"> New System Status Page <ul style="list-style-type: none"> Customers can now register for the UPS Developer Kit Community and subscribe to the 'System Status Page' for proactive email alerts when system status changes occur (Note: UPS Developer Kit Community can be accessed from the UPS Developer Resource Center) <p>New User Guide and Quick Reference Guide Available at UPS Developer Resource Center</p> <ul style="list-style-type: none"> There are now two new customer reference materials never before available. The first is a UPS Developer Kit User Guide, which takes the developer through the step by step process of gaining access to API documentation, testing/production environments, and available tech support resources. The second is a UPS Developer Kit Quick Reference Guide that summarizes at a very high level gaining access to the UPS Developer Kit and tech support resources. <ul style="list-style-type: none"> New User Guide (comprehensive access guide) New Quick Reference Guide (high level quick reference guide)
<p>July 2012</p>	<p>New Air Freight support for shipping and rating using the Gemini APIs.</p> <ol style="list-style-type: none"> Expansion to 14 new Americas countries. <ul style="list-style-type: none"> Bahamas (BS), Bermuda (BM), Bolivia (BO), Cayman Islands (KY), Columbia (CO), Ecuador (EC), El Salvador (SV), Honduras (HN), Nicaragua (NI), Paraguay (PY), Peru (PE), Uruguay (UY), US Virgin Islands (VI), Venezuela (VE) <p>UPS Label Delivery</p>

Release	New Features
	<p>Labels and Receipts are supported in local language for the abovementioned countries.</p> <p>Labels and Receipts are supported in Local languages for Bulgaria, Estonia, Greece, Latvia, Lithuania</p> <p>2. Improved email Technical Support hours and response time as follows:</p> <p><i>a. 1st Level Email Tech Support -</i></p> <ul style="list-style-type: none"> Hours of operation for 1st Level Email Tech Support: 7:30am to 9pm EST Monday through Friday and 9am to 6pm EST Saturday and Sunday. The desk is closed on UPS Holidays. 1st Level Email Tech Support email response time is planned to be within 4 business hours of the initial request. Business hours are defined as hours of operation of the tech support desks when service technicians are working. <p><i>b. Escalation Tech Support -</i></p> <ul style="list-style-type: none"> If you receive an email that your case log has been escalated the following hours apply Hours of operation: 8am to 8pm EST Monday through Friday. The desk is closed weekends and on UPS Holidays. Escalation Support desk response time is planned to be within 24 hours during normal hours of operation. <p>For more details please download and review the latest updated Developer Guides.</p>

1.2.2 How to Use this Guide

If you are an experienced developer, you can begin developing applications quickly after reviewing "Required Steps for Integrating"

If you would like a more step-by-step guide to developing and deploying the Developer APIs, "Planning Your Applications" provides advice and describes options for developing and deploying applications and web sites that use UPS Developer APIs.

The "UPS Developer API Technologies" section explains key technologies on which the Developer APIs rely. That section also includes hints for using those technologies in various software development environments.

If you would like to learn more about what the UPS API covered in this guide can do for your applications, refer to the section on understanding the UPS API Services in this guide.

A complete technical reference to the Developer API covered in this guide is found in the API Reference section with details for the programming interfaces.

Additional material, including reference tables and lists, may be found in the appendices.

1.3 Business Processes and Rules

- UPS Worldwide Express Freight shipment requires a minimum of five labels. (The API itself will produce only one label.)
 - Please note a minimum total of five labels must be printed for each pallet.
- When registering for the Shipping API, a customer must either have an existing account number or open a new account (instructions w/ screen shots noted in separate doc)
- In order to add an account number to your MyUPS ID for the US and CA, you must have your Invoice Level Control ID and a Plan level Control ID, UPS Account Number, Country, Amount due and date of invoice for authentication.
- You can void a shipment from the following origin countries: US, PR and CA, no restrictions on destinations
- Date is not an element in the Shipment portions of the request... Date is an element in Pickup portion and can be a future date...effective Jan2010 this option will only be available through the Pickup API
- Shipping API does not have a tag to support the Electronic Export Information (EEI) for the Shipper's Export Declaration (SED), a customer may manually enter the Employer Identification Number (EIN) on the label.
- Must have UPS 6 digit account numbers in MyUPS profile to be able to bill to that account number.
- Only AddressLine1 is printed for ShipFrom section on the label. Address Line 1, 2 and 3 will be printed on the label for the ShipTo Address if provided in the request

1.4 Required Steps for Integrating

The required steps for integrating the UPS APIs are listed here for UPS XML Services.

UPS XML Services

1. Review the UPS Technology Agreement available at www.ups.com. This agreement requires that you follow certain procedures and practices in using UPS Developer APIs.
2. Develop applications that make use of standard HTTP communications protocols, SSL security, and XML-based document representations.
3. Test your application and/or web site using the designated UPS staging environment.
4. If you are a UPS Ready developer, review your application with UPS.
5. Obtain UPS Label Certification for your application. (If you are a new customer or if you haven't previously certified. Please see the "UPS Label Certification" section for further details.).
6. Deploy your application for your customers.
7. Ensure the UPS Shipper Account number is added to the user's profile. This can be done at myups.com.

1.5 Planning Your Applications for XML

Planning is a key part of any successful development activity, and UPS Developer API applications are no exception. This section helps that planning by describing the important activities of any UPS Developer API application project. It provides an overview of the steps required to develop applications, and it describes key factors and choices necessary to deploy those applications.

1.5.1 UPS Developer API Applications

Many different types of applications can take advantage of UPS Developer APIs. Those application types include dedicated desktop applications, databases, web applications, and documents. The following figures illustrate some of the possibilities for applications using UPS Developer APIs. The only essential requirement for all of these applications is that they must have access to the Internet.

Figure 1: Dedicated applications that users run on their desktops can access UPS Developer APIs.

Figure 2: Database applications can access UPS Developer APIs and return information to their clients

Figure 3: Web sites can access UPS Developer APIs and return information to users' web browsers.

Figure 4: Non-traditional applications such as Microsoft Office or Adobe Acrobat documents can use UPS Developer APIs to automatically update their content.

The UPS Developer APIs can be implemented withal of these types of applications and many others. Virtually any software that needs instant, up-to date access to UPS services can take advantage of UPS Developer APIs.

1.5.2 Licensing the UPS Developer APIs

As part of the UPS Technology Agreement, users of the APIs have certain obligations that are spelled out within the service agreement and its exhibits. Regardless of the manner in which the UPS Developer APIs are integrated into your specific e-commerce web site or enterprise application, you must adhere to appropriate usage requirements.

1.5.2.1 Branding Requirements

UPS should receive attribution and branding in all applications (including websites and software applications) that use the Developer APIs. No End User, Third Party Developer or Access User should be permitted to use the Developer APIs without providing branded recognition to UPS. Your use of the UPS logo can in no way imply endorsement, sponsorship or certification of your ecommerce web site or enterprise application by UPS. You are not allowed to use or alter the information returned by the UPS Developer APIs in a way that misrepresents the information or the functionality of the service.

1.5.3 Developing Client Applications for Developer APIs

When you develop software that uses the UPS Developer APIs, you are building a client application. Because the UPS Developer APIs rely on standard Internet based technology, you can develop those applications using a wide variety of software development platforms, including Microsoft's Visual Studio, the Java Standard Edition and Enterprise Edition distributions, and many open source projects. This section introduces important technologies available in each of these development environments. Later sections of this document include more details on using each platform. Look for the icons in the left margin, which identify information relevant to a particular development environment.

1.5.3.1 Microsoft Visual Studio

Developers using the Microsoft Visual Studio environment can rely on the Microsoft XML Core Services (MSXML) for interacting with UPS Developer APIs. Those services include functions to help applications create requests for and interpret responses, and they include functions to manage the communications between applications and UPS.

1.5.3.2 Java Standard Edition and Enterprise Edition

Java developers can find all the classes they need for UPS Developer APIs in the Java Standard Edition and Enterprise Edition distributions. The URL class in the java.net package provides the functions required for communication with UPS servers, and the Java API for XML Processing (JAXP) services let programs create requests and interpret responses from UPS.

1.5.3.3 Open Source

There are a number of open source efforts that include technology useful for creating Developer API client applications; open source developers may find two particular projects to be especially helpful. The [libcurl](#) project is a library of functions that can manage the communications with UPS servers. For creating requests and interpreting responses, the [xerces](#) project provides essential functions in a variety of software languages.

1.5.4 Getting Technical Support

Technical Support (U.S.)

There are four channels for obtaining support for the UPS Developer Kit (UDK) APIs all of which are accessed through the **UPS Developer Resource Center** at the following link:

<http://www.ups.com/content/us/en/resources/techsupport/developercenter.html?WT.svl=SubNav>

Or by following these steps:

1. Go to www.ups.com.
 2. Mouse over the Support tab and select Technology Support
 3. In the left navigation panel of the page select the link “Developer Resource Center”.
- **Email Technical Support** – available in the right hand column on the **UPS Developer Resource Center** web page. This is *the* support channel for technical support and questions regarding API integration. It is accessed by logging in to myUPS and attaching your XML Request/Response files and any other pertinent information about your integration [please see Appendix A for detailed instructions and screen shots]. UPS Email Technical Support can only support the XML Request/Response pair. They cannot consult customers and developers on how to integrate the XML into their internal or purchased software.
 - **UPS Developer Kit Community** – available in the right hand column of the **UPS Developer Resource Center** web page. This is a community forum for developers to answer one another’s questions and share information therefore the response times may be slower. If you have an immediate need for technical support contact UPS Email Tech Support above and they will respond within 4 business hours (see hours below). The remainder of the site contains online versions of all API developer guides and FAQs.
 - **UPS Developer Kit Knowledge Base** - available in the right hand column of the **UPS Developer Resource Center** web page. This is a self-service support .pdf document that can be opened or downloaded. It contains over 240 frequently asked questions about every mode and service supported by the UDK APIs. It’s also available in an online version at the UPS Developer Kit Community.
 - **General Question Phone Support (U.S. only)** – available in the right hand column of the **UPS Developer Resource Center** web page. Phone support is the *least comprehensive* support mechanism for the developer. This channel of support addresses questions about the user interface at ups.com and how to gain access to the APIs and navigate the Access Key request process. They do not provide technical support for XML Request/Response issues and questions. Those types of questions must go through Email Technical Support.

Getting Started with Email Technical Support

1. Got to ups.com and log in to myUPS.
2. Hover over the “Support” tab and select “Technology Support”.
3. On the Technology Support page select the Developer Resource Center link from the left navigation.
4. On the Developer Resource Center page select the “Email UPS” link in the right hand column.
5. Enter all relevant information including name, enter email address, select Support Category “Technical Support”, and select Support Topic “Developer Resource” [which identifies UPS Developer Kit APIs tech support]. Click next.
6. Scroll down to the middle of the email form and complete the fields “Your Telephone”, “Stage of Development”, “Developer Resource” which is which API you are integrating, “Attach File” where you attach your XML Request/Response Pair, and any pertinent description of the issues in the “What is your question or comment?” field.
7. Select “Send Email” button.
8. A response is provided that explains someone from UPS will contact you. Please base the response time on the detailed information listed below about tech support hours of operation and response times.

(For screen shots of this process please see Appendix A at the end of this guide.)

1st Level Email Technical Support Business Hours and Response Times:

- a. Hours of operation for 1st Level Email Tech Support: 7:30am to 9pm EST Monday through Friday and 9am to 6pm EST Saturday and Sunday. The desk is closed on UPS Holidays.
- b. 1st Level Email Tech Support email response time is planned to be within 4 business hours of the initial request. Business hours are defined as hours of operation of the tech support desks when service technicians are working.

This means if you submit an email tech support request after business hours the 4 hour response clock will not begin until the following morning at 7:30am EST M-F and 9am EST Saturday and Sunday (UPS Holidays excluded).

PLEASE NOTE:

If you are sent an email from 1st Level Email Tech Support stating your case log # has been escalated, the 24 hour planned response clock starts from the time you receive the email from 1st Level Email Tech Support (provided the Escalation Support desk is open). If not, then the clock will begin when the Escalation Support desk opens.

Escalation Support Business Hours and Response Times:

- c. Hours of operation: 8am to 8pm EST Monday through Friday. The desk is closed weekends and on UPS Holidays.
- d. Escalation Support desk response time is planned to be within 24 hours during normal hours of operation.

This means if your case log is escalated at 8:30pm on Friday, you will not receive an email response from the Escalation Support desk at the latest until Monday at 8pm (Saturdays, Sundays, and Holidays are excluded). Response times are from the time the case log was escalated plus 24 hours which do NOT include the weekends or UPS holidays.

There may be some scenarios when the tech support team is meeting planned response times but it appears as if it's taking too long. Below is a brief example where the planned response time is met but nothing happened over the weekend.

Example –

Customer submits tech support email at 7am on Friday. The clock for 4 hour response will not begin until 7:30am EST for the 1st level tech support team. They respond within 4 hours at 11:30am EST that same Friday stating the case log has been escalated and providing the case log #.

The escalation desk receives the case log at 11:30am EST. They begin work on evaluating the problem and have planned to either update the customer within 24 hours or solve the problem within 24 hours. Either way, the customer will hear from the escalation desk within 24 hours with some type of disposition on their case log. The escalation desk clock begins when they receive a case log from 1st level tech support during business hours, M-F 8am to 8pm EST. In this case, the clock begins at 11:30am EST if the escalation desk does not have an answer by 8pm EST on Friday the desk has until 11:30am EST the following Monday to either provide a resolution or a status update to the customer on the case log. The Escalation Desk continues work on the case log on Monday beginning at 8am EST. They receive resolution at 1030am EST Monday and send the resolution to the customer. The Escalation Desk has met their 24 hour planned response time.

Technical Support (Non-U.S.)

For Non-US countries supported by the UPS Developer Kit follow the instructions in Appendix A. However, to get to the UPS Developer Resource Center page please complete the following steps.

1. Log in to myUPS for the country from which you downloaded the developer guides.
2. Select the Support tab and in the drop-down select Technology Support.
3. Select from the left navigation the “UPS Developer Resource Center” link.
4. Continue with email form as described above.

Please also note that email response times for non-US requests vary. Translations and escalations may delay the process. If a quicker response is required, please access the US web site directly and complete an email technical support form from the US web site.

1.5.6 Keeping Up-to-Date

As UPS adds new services and features, Developer API will evolve, offering more features and service benefits. Once you register to use UPS Developer API, UPS will notify you by e-mail of updates and changes to the Developer API. You can return to the UPS Support area of ups.com for the latest updated information about UPS Developer API.

- It is essential that an accurate e-mail address for your company be maintained.
- In addition, UPS recommends that you complete the secondary contact information to ensure that your organization receives the latest updates.
- You should update your profile when changes or responsibilities for the UPS Developer API change within your company.

To change your profile information, go to UPS.com and log in using your MyUPS.com User ID.

1.6 UPS Developer API Technologies for XML

The foundation technologies for UPS Developer APIs are the same underlying technologies in use on the Internet today. They include the Hypertext Transfer Protocol (HTTP) with Secure Sockets Layer 3 (SSL3) security and the Extensible Markup Language (XML). Because these technologies are critical to the Internet, most software development API provide many powerful features that make it easy for application programs to use them. This section provides a quick introduction to the technologies and to the API that can support them.

1.6.1 Hypertext Transfer Protocol and Secure Sockets Layer 3

Today's Internet supports a wide variety of applications including email, instant messaging, web browsing, and voice communications. All of these applications have a well-defined set of rules that determines how they communicate. Those rules are known as *protocols*. As an Internet application themselves, the UPS Developer APIs also rely on protocols to set the rules for their communications. The primary protocol for UPS Developer APIs is the hypertext transfer protocol, or HTTP.

HTTP is a relatively simple protocol. An application that wants to use a Developer API acts as an HTTP client. It sends its request to UPS as part of an HTTP POST message. UPS servers reply to each request using an HTTP response message.

Figure 1. UPS Developer APIs accept requests from client applications in HTTP POST messages and reply to the requests with HTTP responses.

As part of the POST message, client applications indicate the type of content the message contains using an HTTP Content-Type header. For UPS Developer APIs, that content type should be `application/x-www-form-urlencoded`. (Presently, Version 1.1 is supported)

In many cases the UPS Developer APIs exchange information that should be kept private. To protect confidential information, the Developer APIs rely on the Secure Sockets Layer 3 (SSL3) protocol in addition to HTTP. When two systems communicate using SSL, the protocol creates a secure channel between them, and it encrypts all information that they exchange using this channel. The SSL protocol that Developer APIs use is the same protocol used to secure millions of on-line purchases on the web.

Figure 2: SSL creates a secure channel across a network and protects confidential communications using that channel.

1.6.2 Working with HTTP and SSL in Application Programs

UPS Developer APIs are not the only Internet services that rely on the HTTP and SSL protocols. Both protocols, in fact, were originally developed for web browsing, and they provide the foundation for the majority of Internet applications. Because HTTP and SSL are so common, software development API make using these protocols very simple.

Because HTTP and SSL are commonly used for web browsing, software development API often rely on the same notation and abbreviations as standard web browsers. In particular, most API identify a specific service (such as a UPS Developer API) using a Uniform Resource Locator (URL). URLs begin with an abbreviation of the communication protocol. For UPS Developer APIs that abbreviation will always be "https" to indicate HTTP and SSL. The protocol abbreviation is followed by a colon, two slashes, and the name of a server. Additional information about the specific service can follow the server name; it is written like the path to a file in a directory, with slashes separating individual folders. Figure 3 shows how a URL combines these individual components.

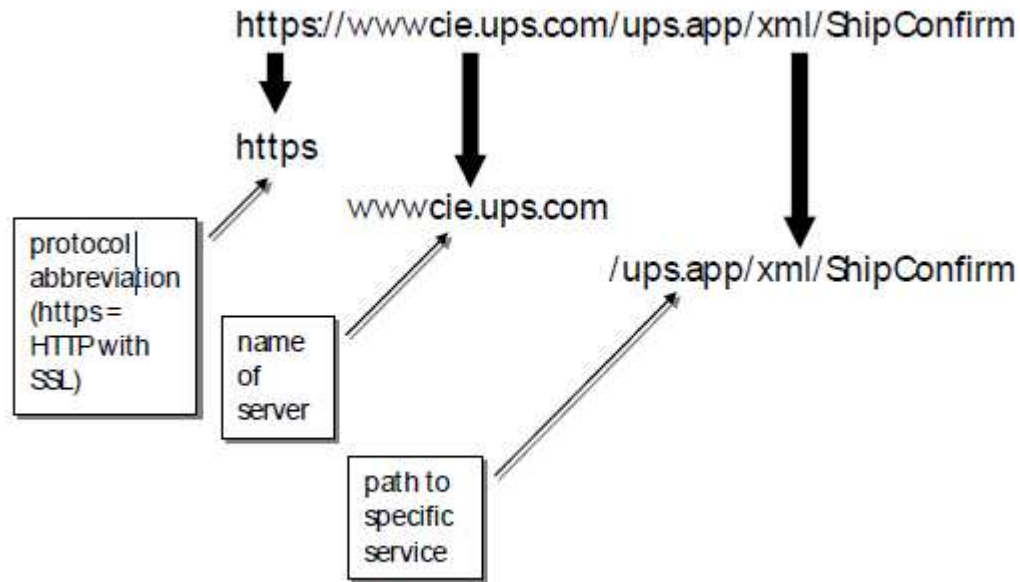

Figure 3. URLs identify communication protocols, servers, and specific services.

SSL Certificate Changes and Renewals:

UPS has migrated from Unchained to Chained Digital Certificates to improve security for UPS servers. Chained Digital Certificates requires the use of SSL 3.0. Our migration from SSL 2.0 to 3.0 was completed between 6/15/2008 and 3/3/2009.

Renewal of UPS.com SSL Certificates are coordinated by UPS Security Services every two years.

There is a concern that some UPS Developer Kit users who store UPS Certificates internally may have issues when SSL Certificates are renewed. It is recommended that UPS Developer Kit users not store UPS Certificates internally; however if a customer finds this necessary due to specific needs within their company, they may need to add renewed certificates to the their trust store.

There are a number of ways one can add a certificate to the application. One way to obtain the proper certificate is by placing a UPS Developer Kit URL, <https://onlinetools.ups.com/ups.app/xml/ShipConfirm>, for example, in a browser, connect to the URL, and double-click on the "lock" on the bottom right of the window (using Internet Explorer 7). After that the steps can be followed to install the certificate.

Also, in the event that the aforementioned solution does not work successfully for you we have been provided with the following certificate which should allow you to connect once it has been successfully added. You should be able to paste the following string into Notepad and save the file locally. Then, it will be necessary to have the client application reference the file so that it will know that this is the trusted certificate for making a connection to UPS.

This is the Verisign Class 3 Secure Server CA - G2 certificate that the client must trust:

The subsections that follow provide brief introductions to using HTTP and SSL with various software development API, including Microsoft Visual Studio, Java Standard and Enterprise Edition, and popular open source environments.

1.6.2.1 Microsoft Visual Studio

The Microsoft Visual Studio environment includes many API, classes, and libraries that simplify the use of HTTP and SSL protocols. A very convenient set of API are included in the Microsoft XML Core Services (MSXML). The following code fragment shows how a Visual Basic program can send a request and retrieve the response. To keep the example as simple as possible, no exception handling is included in the figure. Production software should, of course, appropriately handle all exceptions

```
' create the object that manages the communication
Dim oXMLHttp As XMLHTTP
Set oXMLHttp = New XMLHTTP
' prepare the HTTP POST request
oXMLHttp.open "POST", "https://www.server.com/path", False
oXMLHttp.setRequestHeader "Content-Type", _
    "application/x-www-form-urlencoded"
' send the request
oXMLHttp.send requestString
' server's response will be available in
oXMLHttp.responseXML
```

Figure 4. Visual Basic programs can use features of the MSXML API to send and receive messages using HTTP and SSL.

1.6.2.2 Java Standard Edition and Enterprise Edition

In a Java SE or EE environment, the URL class in the java.net package provides a convenient way to manage HTTP and SSL communications. Figure 5 contains a small code fragment that demonstrates the use of this class. As above, the fragment doesn't include exception handling that should be inherent in any production software.

```

import java.io.*;
import java.net.*;
URL url = new URL("https://www.server.com/path");
URLConnection conn = (URLConnection) url.openConnection();
conn.setRequestMethod("POST");
conn.setRequestProperty("Content-Type", "application/x-www-form-
urlencoded");
conn.setDoOutput(true);
PrintWriter out = new PrintWriter(conn.getOutputStream());
out.println(requestString);
out.close();
BufferedReader in = new BufferedReader( new
InputStreamReader(conn.getInputStream()));
/* server response is available by reading the in object */

```

Figure 5. The URL class from the java.net package is a convenient way for Java programs to use HTTP and SSL

1.6.2.3 Open Source

The libcurl project is an open source project that includes support for using HTTP and SSL protocols. The fragment in Figure 6 shows how to set up libcurl to send a request using HTTP and SSL. It relies on a callback function to accept the server's response.

```

CURL *curl;
CURLcode res;
/* prepare to send the request */
curl = curl_easy_init();
curl_easy_setopt(curl, CURLOPT_URL,
https://www.server.com/path");
curl_easy_setopt(curl, CURLOPT_POSTFIELDS, requestString);
curl_easy_setopt(curl, CURLOPT_WRITEFUNCTION,
fnCallback);
res = curl_easy_perform(curl);

```

Figure 6. The open source libcurl library simplifies the use of HTTP and SSL

1.6.3 Extensible Markup Language (XML)

The Extensible Markup Language (XML) is an international standard developed by the World Wide Web Consortium, the governing body for web standards and guidelines. XML provides a way to identify the structure of content within a document or, in the case of UPS Developer APIs, a message. Figure 7 shows how a simple XML message could describe a book.

```
<?xml version="1.0" encoding="UTF-8" ?>
<book>
  <title>
    HTTP Essentials: Protocols for Secure, Scaleable Web Sites
  </title>
  <author>
    <firstname>
      Stephen
    </firstname>
    <lastname>
      Thomas
    </lastname>
  </author>
  <publisher>
    John Wiley and Sons
  </publisher>
  <year>
    2001
  </year>
  <isbn>
    0-471-398233
  </isbn>
</book>
```

Figure 7: XML identifies the structure of documents, as in this document describing a book.

As the figure illustrates, XML is a text-based format. XML messages contain regular text, though that text follows specific rules that XML defines. XML distinguishes different parts of a message with a label known as a *tag*. Tags in the example include `<book>`, `<title>`, `<author>`, `<firstname>`, etc. A tag can indicate the start of information if it begins with an angle bracket (`<`), and a tag can indicate the end of information if it begins with an angle bracket and a slash (`</>`). A beginning tag, ending tag, and the information between the two make up an *element*. In this example the publisher element tells us that the publisher for the book is "John Wiley and Sons." The figure also shows how an XML message follows a defined structure. Elements can be contained within other elements, as `<firstname>` and `<lastname>` are included within the `<author>` element. This structure indicates that `firstname` and `lastname` are "children" of the `author` "parent."

Although XML elements can contain almost any text, there are two special characters that cannot appear within an element. Those characters are the less-than sign (`<`) and the ampersand (`&`). Elements that include these contents must replace the special characters with `"<"` or `"&"` respectively. The name of a large telecommunications company, for example, would appear as `"AT&T"` within an XML message.

Because XML is a text-based format, software has to take extra steps to use XML with binary data. For example, some UPS services return binary image data such as the image of

a shipping label. To include this data in an XML message, UPS converts it from binary to text format using an algorithm known as *Base64 encoding*. The "The Base16, Base32, and Base64 Data Encodings" standard, also known as RFC 3548, defines that algorithm.

Although XML messages consist of a series of text characters, most software development API represent XML messages in a tree-like data structure. That representation clarifies the structure of the message. Figure 8 shows the same XML message as Figure 7, but it uses a more visual representation to highlight the message's structure.

Figure 8. It is often convenient to show XML messages in a tree-like graph to highlight their structure.

The example of Figure 7 and Figure 8 is a relatively simple XML message with just a few elements. UPS Developer APIs rely on XML messages that are larger than this simple example, and it is difficult to show them in a pure graph like Figure 8 without losing legibility. Figure 9 shows an alternate way of depicting the tree-like structure of XML messages; it uses the same example as before.

Figure 9. It is possible to show the tree-like structure of XML messages using text.

A great deal of information on XML is available on the Internet. A good starting point for further research is the World Wide Web Consortium's main page on XML at <http://www.w3.org/XML/>.

1.6.4 Working with XML in Application Programs

The popularity of Extensible Markup Language means that nearly all development environments include sophisticated support for creating and interpreting XML messages. This subsection provides a brief introduction to working with XML in Microsoft, Java, and Open Source environments. The examples it contains are only representative approaches; many other approaches are possible.

1.6.4.1 Microsoft Visual Studio

The Microsoft XML Core Services (MSXML) offers one way to work with XML documents in Visual Studio applications. Figure 10 shows one approach for creating an XML message in Visual Basic, and Figure 11 demonstrates how Visual Basic programs can interpret XML responses. To remain as simple as possible, the examples do not include any exception handling. Production software should, of course, provide full exception handling.

```

' Define a variable and initialize it to a new XML message
Dim dom
Set dom = New DOMDocument30
' Set properties of the variable
  
```

```

dom.async = False
dom.validateOnParse = False
dom.resolveExternals = False
dom.preserveWhiteSpace = True
' Identify the message as XML version 1.0
Set node = dom.createProcessingInstruction("xml",
"version='1.0'")
dom.appendChild node
Set node = Nothing
' Create the root (book) element and add it to the message
Dim root
Set root = dom.createElement("book")
dom.appendChild root
' Create child elements and add them to the root
Dim node
Set node = dom.createElement("title")
node.text = "HTTP Essentials: ..."
root.appendChild node
Set node = Nothing
Set node = dom.createElement("author")
Dim child
Set child = dom.createElement("firstname")
child.text = "Stephen"
node.appendChild child
Set child = Nothing
Set child = dom.createElement("lastname")
child.text = "Thomas"
node.appendChild child
root.appendChild node
' And so on

```

Figure 10. Visual Basic can create XML messages through the DOMDocument object.

```

' Define a variable to hold the parsed message
Dim dom As New DOMDocument30
dom.async = False
dom.validateOnParse = False
dom.resolveExternals = False
dom.preserveWhiteSpace = True
' Try to parse the message
If dom.loadXML(messageText) = False Then
' The text did not contain valid XML
End If
' Get the title information from the message
Dim node As IXMLDOMNode
Set node = dom.selectSingleNode("/title")
If node Is Nothing Then
' The message did not contain title information
Else
' Do something with node.text
End If

```

Figure 11. Visual Basic can read the contents of XML messages after parsing them with the DOMDocument object.

Visual Basic also has built-in classes to interpret Base64-encoded values. The `Convert.FromBase64String()` function converts from a Base64-encoded string to an array of 8-bit unsigned integers

1.6.4.2 Java Standard Edition and Enterprise Edition

The Java API for XML Processing (JAXP) is the preferred approach for working with XML messages in Java. Figure 12 shows how a `BookClass` object can be converted into an XML message, a process that JAXP calls *marshalling*. Similarly, Figure 13 shows the reverse process, where an XML message is converted into a `BookClass` object. This reverse process is *unmarshalling*. As above, exception handling code is omitted from these examples to make them as clear as possible.

```
import javax.xml.bind.JAXBContext;
import javax.xml.bind.Marshaller;
import java.io.StringWriter;
/* create the book object */
BookClass book = new BookClass("HTTP Essentials...", new
    AuthorClass("Stephen", "Thomas"),
    "John Wiley and Sons", "2001", "0-471-398233");
/* convert it to an XML string */
StringWriter writer = new StringWriter();
JAXBContext context = JAXBContext.newInstance(book.class);
Marshaller m = context.createMarshaller();
m.marshal(book, writer);
```

Figure 12. JAXP provides a convenient way for Java applications to create XML messages from Java objects.

```
import javax.xml.bind.JAXBContext;
import javax.xml.bind.Marshaller;
import java.io.StringReader;
/* xmlMessage contains the XML message */
StringReader reader = new StringReader(xmlMessage);
JAXBContext context = JAXBContext.newInstance(Book.class);
Unmarshaller u = context.createUnmarshaller();
BookClass book = (BookClass) u.unmarshal(reader);
/* access properties of the book */
System.out.println(book.getAuthor().getFirstname());
```

Figure 13. JAXP also gives Java applications a convenient way to retrieve elements from an XML message

1.6.4.3 Open Source

As of this writing, the most popular open source API for working with XML is the xerces project. That project includes C++, Java, and Perl implementations of an XML library. The xerces distribution includes extensive sample applications. The code fragment in Figure 14 demonstrates creating an XML message in C++ with the xerces library. Figure 15 shows

sample code for accessing an element within an XML message. In both cases exception handling is not shown in order to keep the examples as simple as possible. Production software should always contain full exception handling.

```
DOMImplementation* impl =
DOMImplementationRegistry::getDOMImplementation(X("Core"));
DOMDocument* doc = impl->createDocument(0, X("book"), 0);
DOMElement* rootElem = doc->getDocumentElement();
DOMElement* titleElem = doc->createElement(X("title"));
rootElem->appendChild(titleElem);
DOMText* titleVal = doc->createTextNode(X("HTTP Essentials..."));
titleElem->appendChild(titleVal);
```

Figure 14. The Xerces C++ library includes

```
XMLCh* TAG_book;
XMLCh* TAG_title;
xercesc::XercesDOMParser *parser;
XMLPlatformUtils::Initialize();
TAG_book = XMLString::transcode("book");
TAG_title = XMLString::transcode("title");
parser = new XercesDOMParser;
parser->parse(inputText);
DOMDocument* xmlDoc = parser->getDocument();
DOMElement* elementRoot = xmlDoc->getDocumentElement();
DOMNodeList* children = elementRoot->getChildNodes();
const XMLSize_t nodeCount = children->getLength();
for (XMLSize_t cnt = 0; cnt < nodeCount; ++cnt ) {
    DOMNode* currentNode = children->item(cnt);
    if( currentNode->getNodeType() && currentNode->getNodeType() ==
    DOMNode::ELEMENT_NODE ) {
        DOMELEMENT* currentElement =
        dynamic_cast< xercesc::DOMELEMENT*>( currentNode );
        if( XMLString::equals(currentElement->getTagName(), TAG_title)) {
            /* do something with the title */
        }
    }
}
```

Figure 15. The Xerces C++ library also supports parsing XML messages to find individual elements.

1.7 Understanding XML Shipping Services

This section provides an overview of Shipping Services. It describes the services available through the Shipping API, and it explains—at an overview level—how the APIs operate.

1.7.1 What Shipping Services Can Do

The Shipping API makes UPS shipping services available to client applications that communicate with UPS using the Internet. With this API, applications can prepare or schedule small package shipments, manage returns, or cancel previously scheduled shipments.

1.7.1.1 Shipments

Shipping Services give your applications many ways to manage the shipment of small packages to their destination. UPS offers a range of delivery time frames from same day to standard ground transportation. Shipments may be within the United States or international, and they may range from letter documents to large packages. (Note: for freight services, please refer to the APIs designed for freight services.)

UPS also supports many valued added services for shipments, including collect on delivery (COD), declared value, delivery confirmation, and automatic notification of delivery status.

For full details on all UPS shipping services, please consult the latest *UPS Rate and Service Guide* available at <http://www.ups.com>. Note that these shipments are sometimes called *forward shipments* or *outbound shipments* to distinguish them from returns.

1.7.1.2 Cancellations (Voids)

If you need to cancel a previously processed shipment, the UPS Shipping Services let client applications automate that task. This process is known as *voiding* a shipment.

1.7.1.3 Returns

UPS Shipping Services also support the UPS returns services. (Note: UPS can provide a label for a return shipment even if it did not provide a label for the forward shipment.) With return services, you can include a label in an outbound shipment, ask UPS to email or mail the return label to your customer, or request a UPS driver to pick up the package at the your customer's location. As with forward shipments, details on return shipment services can be found in the latest *UPS Rate and Service Guide* at <http://www.ups.com>.

1.7.2 How Shipping Services Work

Because forward and return shipments share many of the same characteristics (they have an origin, destination, service type, etc.), UPS APIs use the same procedure and message types for both services. Cancelling or voiding a shipment requires its own procedure and message types.

1.7.2.1 Two Step (Phase) Shipping Process

The process to use the Shipping API consists of two phases, the **ship confirm** phase followed by the **ship accept** phase. An XML request/response pair is exchanged between the client and server in each phase. The XML messages exchanged in the confirm phase are the ShipmentConfirmRequest input message and the ShipmentConfirmResponse output message.

The XML messages exchanged in the accept phase are the ShipmentAcceptRequest input message and the ShipmentAcceptResponse output message. Shipment information is specified in the ShipmentConfirmRequest message. After the ShipmentConfirmRequest message is created, it must be sent to the Shipping API ShipConfirm URL address, using a HTTP POST. After the ShipmentConfirmRequest message is received by the server, it is preprocessed and validated. If the ShipmentConfirmRequest message passes all validation tests, a ShipmentConfirmResponse message is returned containing basic rate information, the shipment Id, and the shipment digest. If the ShipmentConfirmRequest message fails validation, a ShipmentConfirmResponse message is returned containing error information. The majority of the validation is performed in this phase.

The actual shipment has not been created at this point.

In order to create a shipment and receive the shipping label(s), a ShipAcceptRequest message must be created and sent to the Shipping API ShipAccept connection address URL, using a HTTP POST. The ShipAcceptRequest message must contain the shipment digest returned in the ShipmentConfirmResponse message. After the ShipmentAcceptRequest message is received in the server, additional processing validation is performed. If the ShipmentAcceptRequest message passes all validation tests, a ShipmentAcceptResponse message is returned containing detailed rate information, the Shipment Id, package tracking numbers and the shipping label(s). If the ShipmentAcceptRequest message fails validation, a ShipmentAcceptResponse message is returned containing error information.

1.7.2.2 Forward and Return Shipments

For forward and return services client applications use a four-step procedure to process a shipment. As

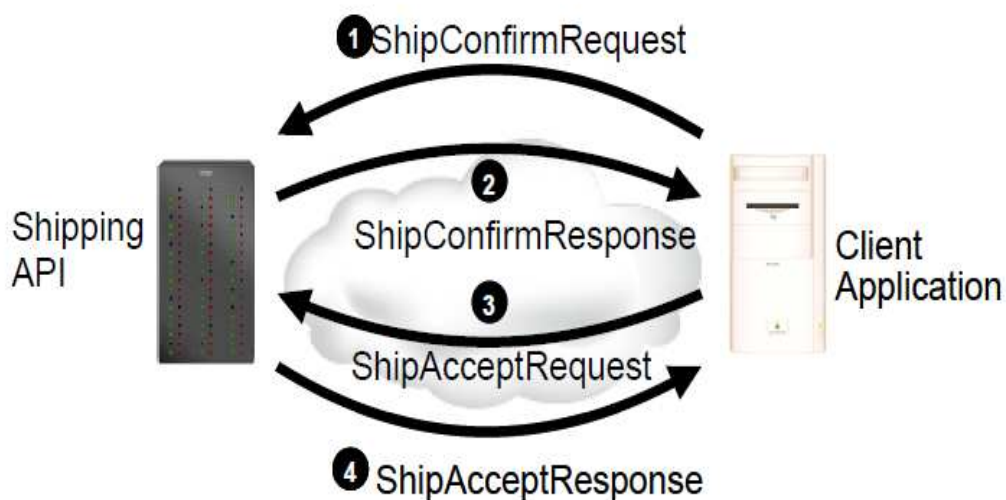

Figure 1 shows, the procedure begins when a client application sends a ShipmentConfirmRequest to UPS. This request provides details of the shipment and the desired UPS services. UPS replies to this request with a ShipmentConfirmResponse. ShipmentConfirmResponses include estimated rates for the shipment. If the rates and services are acceptable to the client, it sends a ShipmentAcceptRequest to UPS. This message authorizes UPS to charge for the shipment and process the shipment data. UPS acknowledges the request by returning a ShipmentAcceptResponse. For forward shipments and for preprinted return labels, this response includes a label for the shipment.

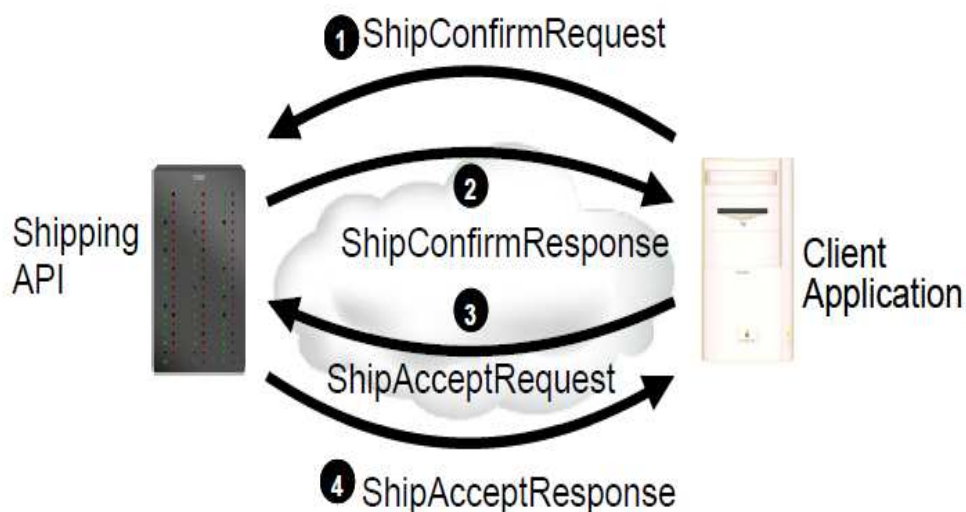

Figure 1. Forward and return shipments require four separate steps to complete the shipment processing.

Clients that want to include preprinted labels as part of forward shipments must perform this four-step procedure twice. One time processes the forward shipment, and the second time retrieves the return label.

1.7.2.3 Cancellations (Voids)

To cancel, or *void*, a previously scheduled shipment, client applications send a `VoidShipmentRequest` to UPS. As Figure 2 illustrates, UPS replies to this request with a `VoidShipmentResponse`.

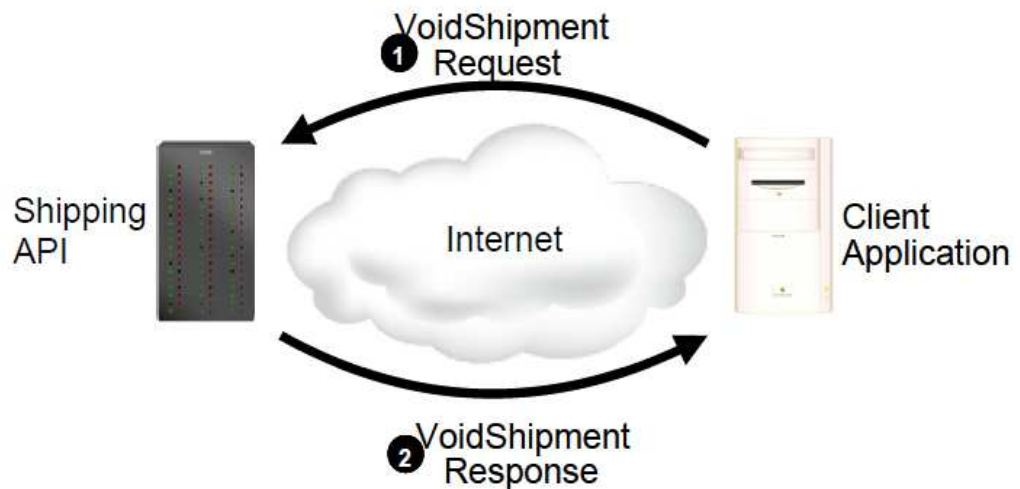

Figure 2. `VoidShipmentRequest` messages let client applications cancel a previously scheduled shipment.

Applications may void forward shipments up to 28 days after initially processing them. Return shipments must be voided within 24 hours.

1.8 The Shipping XML Reference

This section documents the details of the XML messages, including the requests that clients send to UPS and the responses that UPS returns. The first subsection explains the notation that this section uses. It is followed by a section that describes how UPS verifies that client applications are authorized to use the API. The next subsections define the messages used by the API for its services.

1.8.1 Describing XML Messages

As noted previously, all messages that UPS APIs send and receive consist of XML documents. This reference section defines the specific elements within those XML documents.

ShipmentConfirmRequest Example Message

```
<?xml version="1.0" ?>
<AccessRequest xml:lang='en-US'>
  <AccessLicenseNumber>YOURACCESSLICENSENUMBER</AccessLicenseNumber>
</AccessRequest>

1.8.2 Authenticating Client Applications

UPS Shipping Services are only available for authorized UPS customers. To enforce this policy, UPS requires that every message that a client application sends include important authentication information. That information is contained in an AccessRequest XML document that must begin each message.

```

AccessRequest
├── AccessLicenseNumber::string
├── UserId::string
└── Password::string

```

Each AccessRequest{ XE "AccessRequest" } contains three child elements: an AccessLicenseNumber, a UserId, and a Password. The following figure shows an example AccessRequest document.

```
<?xml version="1.0" ?>
<AccessRequest xml:lang='en-US'>
  <AccessLicenseNumber>
    YOURACCESSLICENSENUMBER
  </AccessLicenseNumber>
  <UserId>
    YOURUSERID
  </UserId>
  <Password>
    YOURPASSWORD
  </Password>
</AccessRequest>
```

1.8.3 Shipment Confirm Request

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
ShipmentConfirmRequest	/ShipmentConfirmRequest	Yes	1	Container										
Request	/ShipmentConfirmRequest/Request	Yes	1	Container	N/A	N/A								
RequestAction	/ShipmentConfirmRequest/Request/RequestAction	Yes	1	String	11	Indicates the action to be taken by the XML service.	Must be ShipConfirm.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
RequestOption	/ShipmentConfirmRequest/Request/RequestOption	Yes	1	String	1..256	Optional Processing. nonvalidate = No street level address validation would be performed, but Postal Code/State combination validation would still be performed. validate = Fail on failed street level address validation. Defaults to validate. Note: Full address validation is not performed. Therefore, it is the responsibility of the Shipping API User to ensure the address entered is correct to avoid an address correction fee.	Values blank, validate, or nonvalidate.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
Transaction Reference	/ShipmentConfirmRequest/Request/TransactionReference	No	1	Container	N/A	TransactionReference identifies transactions between client and server.								
CustomerContext	/ShipmentConfirmRequest/Request/TransactionReference/CustomerContext	No	1	String	1..512	Customer context								
Shipment	/ShipmentConfirmRequest/Shipment	Yes	1	Container	N/A	N/A								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
Description	/ShipmentConfirmRequest/Shipment/Description	No	1	String	1..35	The Description of Goods for the shipment. Applies to international shipments only. Provide a detailed description of items being shipped for documents and non-documents. Provide specific descriptions, such as "annual reports" and "9 mm steel screws".								
ReturnService	/ShipmentConfirmRequest/Shipment/ReturnService	No	1	Container	N/A	Type of Return service. When this container exists, the shipment is a return shipment.		X						

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
Code	/ShipmentConfirmRequest/Shipment/ReturnService/Code	Yes*	1	String	1	Return Service types:			X					

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
						2 = UPS Print and Mail (PNM) 3 = UPS Return Service 1-Attempt (RS1) 5 = UPS Return Service 3-Attempt (RS3) 8 = UPS Electronic Return Label (ERL) 9 = UPS Print Return Label (PRL): 10 = UPS Exchange Print Return Label: 11 = UPS Pack & Collect Service 1-Attempt Box 1: 12 = UPS Pack & Collect Service 1-Attempt Box 2: 13 = UPS Pack & Collect Service 1-Attempt Box 3: 14 = UPS Pack & Collect Service 1-Attempt Box 4: 15 = UPS Pack & Collect Service 1-Attempt Box 5: 16 = UPS Pack & Collect Service 3-Attempt Box 1: 17 = UPS Pack & Collect Service 3-Attempt Box 2: 18 = UPS Pack & Collect Service 3-Attempt Box 3: 19 = UPS Pack & Collect Service 3-Attempt Box 4: 20 = UPS Pack & Collect Service 3-Attempt Box 5								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
Documents Only	/ShipmentConfirmRequest/Shipment/DocumentsOnly	No	1	String	0	Indicates a shipment contains written, typed, or printed communication of no commercial value. If DocumentsOnly is not specified then it implies that the shipment contains non documents or documents of commercial value. Default is a shipment contains non-documents or documents of commercial value.	Valid only for shipments with different origin and destination countries. The origin country is not US, and the destination country is not CA, PR or MX.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
Shipper	/ShipmentConfirmRequest/Shipment/Shipper	Yes	1	Container	1..35	Container tag for Shipper's information								
Name	/ShipmentConfirmRequest/Shipment/Shipper/Name	Yes	1	String	1..35	Shipper's company name. For forward Shipment 35 characters are accepted, but only 30 characters will be printed on the label.								
AttentionName	/ShipmentConfirmRequest/Shipment/Shipper/AttentionName	Conditional	1	String	1..35	Shipper's Attention Name. For forward Shipment 35 characters are accepted, but only 30 characters will be printed on the label.	Required if destination is international. Required if Invoice and Co International forms are requested and the ShipFrom address is not present.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
CompanyDisplayableName	/ShipConfirmRequest/Shipment/Shipper/CompanyDisplayableName	No	One	string	1..35	Shipper's Company Displayable Name. This is available for Shipper accounts enabled by UPS and applies to Forward Shipments. The CompanyDisplayableName will be displayed in tracking results and notification messages in place of the name associated with the shipper account. The original shipper account name will be displayed for all Return Services and Import Control Shipments.								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEL	Partial IV
ShipperNumber	/ShipmentConfirmRequest/Shipment/Shipper/ShipperNumber	Yes	1	String	6	Shipper's six digit account number.	Size must be six alphanumeric characters. Must be associated with the UserId specified in the AccessRequest XML. The account must be a valid UPS account number that is active. For US, PR and CA accounts, the account must be either a daily pickup account, an occasional account, or a customer B.I.N account. Drop Shipper accounts are valid for return service shipments only if the account is Trade Direct (TD) enabled. All other accounts must be either a daily pickup account, or an occasional account.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
TaxIdentificationNumber	/ShipmentConfirmRequest/Shipment/Shipper/TaxIdentificationNumber	Cond	1	String	1..15	Shipper's Tax Identification Number	Conditionally required if SED form (International forms) is requested and ship From is not mentioned.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
PhoneNumb er	/ShipmentConfirmRequest/Shipment/Shipper/PhoneN umber	Cond	1	String	1..15	Shipper's Phone Number	Valid values are 0 - 9.If Shipper country is US, PR, CA, and VI, the layout is area code, 7 digit PhoneNumber or area code, 7 digit PhoneNumber, 4 digit extension number; for other countries, the layout is CountryCode, area code, 7 digit number A phone number is required if destination is international.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
FaxNumber	/ShipmentConfirmRequest/Shipment/Shipper/FaxNumber	No	1	String	1..14	Shipper's Fax Number.								
EMailAddress	/ShipmentConfirmRequest/Shipment/Shipper/EMailAddress	No	1	String	1..50	Shipper's email address.								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
Address	/ShipmentConfirmRequest/Shipment/Shipper/Address	Yes	1	Container	N/A	Address of the shipper.	The package should be returned to this address if the package is undeliverable. This address appears on the upper left hand corner of the label. Note: If the ShipFrom container is not present then this address will be used as the ShipFrom address. If this address is used as the ShipFrom the shipment will be rated from this origin address							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEL	Partial IV
AddressLine 1	/ShipmentConfirmRequest/Shipment/Shipper/Address/AddressLine1	Yes	1	String	1..35	Address Line 1 of the shipper. For forward Shipment 35 characters are accepted, but only 30 characters will be printed on the label.								
AddressLine 2	/ShipmentConfirmRequest/Shipment/Shipper/Address/AddressLine2	No	1	String	1..35	Address Line 2 of the shipper. Usually Room/Floor information. For forward Shipment 35 characters are accepted.								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
AddressLine 3	/ShipmentConfirmRequest/Shipment/Shipper/Address/AddressLine3	No	1	String	1..35	Address Line 3 of the shipper. Usually department information. For forward Shipment 35 characters are accepted.								
City	/ShipmentConfirmRequest/Shipment/Shipper/Address/City	Yes	1	String	1..30	Shipper's city. For forward Shipment 30 characters are accepted, but only 15 characters will be printed on the label.								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
StateProvinceCode	/ShipmentConfirmRequest/Shipment/Shipper/Address/StateProvinceCode	Cond	1	String	2..5	Shipper's state or province code. For forward Shipment 5 characters are accepted, but only 2 characters will be printed on the label.	Required if shipper is in the US or CA. If Shipper country is US or CA, then the value must be a valid US State/Canadian Province code. If the country is Ireland, the StateProvinceCode will contain the county.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
PostalCode	/ShipmentConfirmRequest/Shipment/Shipper/Address/PostalCode	Cond	1	String	1..10	Shipper's postal code.	If Shipper country is US or Puerto Rico, 5 or 9 digits is required. . The character - may be used to separate the first five digits and the last four digits. If the Shipper country is CA, then the postal code is required and must be 6 alphanumeric characters whose format is A#A#A# where A is an uppercase letter and # is a digit. For all other countries the postal code is optional and must be no more than 9 alphanumeric characters long.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
CountryCode	/ShipmentConfirmRequest/Shipment/Shipper/Address/CountryCode	Yes	1	String	2	Shipper's country code.	Must be a valid UPS Billing country code. For Forward shipments it must also be an allowable UPS origin country. For Return Shipment the country code must meet the following conditions: 1) At least two of the following country codes are the same: ShipTo, ShipFrom, and Shipper.2) None of the following country codes are the same and are a member of the EU: ShipTo, ShipFrom, and Shipper.3)If any of the two following country codes :ShipTo/ ShipFrom/ Shipper are members in EU otherwise check if the shipper has Third Country Contract.							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEL	Partial IV
ShipTo	/ShipmentConfirmRequest/Shipment/ShipTo	Yes	1	Container	N/A	N/A								
CompanyNa me	/ShipmentConfirmRequest/Shipment/ShipTo/Compan yName	Yes	1	String	1..35	Consignee's company name. For RFA Shipment 35 characters are accepted, but only 25 characters will be printed on the label.								
AttentionNa me	/ShipmentConfirmRequest/Shipment/ShipTo/Attention Name	Cond	1	String	1..35	Contact name at the consignee's location. For RFA Shipment 35 characters are accepted, but only 25 characters will be printed on the label.	Required for: UPS Next Day Air Early A.M. service, and when ShipTo country is different than ShipFrom country. Required if Invoice International form is requested							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
TaxIdentificationNumber	/ShipmentConfirmRequest/Shipment/ShipTo/TaxIdentificationNumber	No	1	String	1..15	Consignee's tax identification number.								

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
PhoneNumber	/ShipmentConfirmRequest/Shipment/ShipTo/PhoneNumber	Cond	1	String	1..15	Consignee's phone number.	Required for: UPS Next Day Air Early A.M. service, and when Ship To country is different than the ShipFrom country. If ShipTo country is US, PR, CA, and VI, the layout is area code, 7 digit PhoneNumber or area code, 7 digit PhoneNumber, 4 digit extension number; number; for other countries, the layout is CountryCode, area code, 7 digit number .							

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules	Shipment Only	Return Only	CO	Nafta CO	Invoice	EEI	Partial IV
FaxNumber	/ShipmentConfirmRequest/Shipment/ShipTo/FaxNumber	No	1	String	1..15	Consignee's fax number.	If ShipTo country is US 10 digits allowed, otherwise 1..15 digits allowed.							
EMailAddress	/ShipmentConfirmRequest/Shipment/ShipTo/EmailAddress	No	1	String	1..50	Ship To email address.								
Address	/ShipmentConfirmRequest/Shipment/ShipTo/Address	Yes	1	Container	N/A	N/A

ShipmentConfirmResponse	/ShipmentConfirmResponse	Cond	One	Container	N/A	N/A	
Response	/ShipmentConfirmResponse/Response	Yes	One	Container	N/A	ShipConfirm response	
TransactionReference	/ShipmentConfirmResponse/Response/TransactionReference	Yes	One	Container	N/A	TransactionReference identifies transactions between client and server.	
CustomerContext	/ShipmentConfirmResponse/Response/TransactionReference/CustomerContext	No	One	String	1..512	The client uses CustomerContext to synchronize request/response pairs. The client establishes CustomerContext, which can contain any information you want, as long as it is valid XML; it is echoed back by the server.	
ResponseStatusCode	/ShipmentConfirmResponse/Response/ResponseStatusCode	Yes	One	String	1	Identifies the success or failure of the transaction. 1 = Successful; 0 = Failure	
ResponseStatusDescription	/ShipmentConfirmResponse/Response/ResponseStatusDescription	Yes	One	String	1	Describes Response Status Code. Returns text of Success or Failure	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
Error	/ShipmentConfirmResponse/Response/Error	Yes	One	Container	N/A	If an error is encountered during the interchange, the Response contains an error. If the error is present, then the ErrorSeverity and ErrorCode are required.	
ErrorSeverity	/ShipmentConfirmResponse/Response/Error/ErrorSeverity	Yes	One	String	1..20	Describes the severity of the error. Transient Error - Customers data has not been processed due to system unavailability. The customer has to wait and try again. Hard Error - The error was encountered processing the customer's data and that the data needs correction. Warning - The customer's data was successfully processed; however, there were warnings encountered during processing.	
ErrorCode	/ShipmentConfirmResponse/Response/Error/ErrorCode	Yes	One	String	1..15	A numeric value that describes the error. Each API defines a range of error codes.	
ErrorDescription	/ShipmentConfirmResponse/Response/Error/ErrorDescription	Yes	One	String	1..50	Describes the error code.	
MinimumRetrySeconds	/ShipmentConfirmResponse/Response/Error/MinimumRetrySeconds	Yes	One	String	1..5	Number of seconds to wait until retry. This field is populated on special conditions of the Transient Error only, as defined by the service. A number between 1 and 86400 (24 hours)	
ErrorLocation	/ShipmentConfirmResponse/Response/Error/ErrorLocation	Yes	One	Container	N/A	Identifies the element in error.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ErrorLocationElementName	/ShipmentConfirmResponse/Response/Error/ErrorLocation/ErrorLocationElementName	Yes	One	String	1..512	The XPATH name of the element in error. This is a valid XPATH pointing to an element in the request document.	
ErrorLocationAttributeName	/ShipmentConfirmResponse/Response/Error/ErrorLocation/ErrorLocationAttributeName	Yes	One	String	1..50	The name of the attribute in error. This is the name of the attribute contained by the Error Location Element.	
ErrorDigest	/ShipmentConfirmResponse/Response/Error/ErrorDigest	Yes	One	String	Bound by the size of the Request data.	The contents of the element in error.	
ShipmentCharges	/ShipmentConfirmResponse/ShipmentCharges	Cond	One	Container	N/A	Shipment charges info. Shipment charges are only guaranteed to be returned for shipments whose origin country is US or Puerto Rico.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
RateChart	/ShipmentConfirmResponse/ShipmentCharges/RateChart	Cond	One	String	1	Rate Type With which Shipment is rated. Possible RateChart values for different regions will be: US 48 origin: 1 – Daily Rates, 3 – Standard List Rates, 4 – Retail Rates Alaska/Hawaii origin: 1 – Daily Rates, 3 – Daily Rates, 4 – Retail Rates All Other origins: 1 – Rates 3 and 4 do not apply	
TransportationCharges	/ShipmentConfirmResponse/ShipmentCharges/TransportationCharges	Yes	One	Container	N/A	N/A	
CurrencyCode	/ShipmentConfirmResponse/ShipmentCharges/TransportationCharges/CurrencyCode	Yes	One	String	3	Transportation charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentConfirmResponse/ShipmentCharges/TransportationCharges/MonetaryValue	Yes	One	String	1..19	Transportation and surcharges value amount.	Valid values are from 0 to 99999999999999.99
ServiceOptionsCharges	/ShipmentConfirmResponse/ShipmentCharges/ServiceOptionsCharges	Yes	One	Container	N/A	N/A	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
CurrencyCode	/ShipmentConfirmResponse/ShipmentCharges/ServiceOptionsCharges/CurrencyCode	Yes	One	String	3	Service options charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentConfirmResponse/ShipmentCharges/ServiceOptionsCharges/MonetaryValue	Yes	One	String	1..19	Service options charges value amount	Valid values are from 0 to 999999999999999.99
TotalCharges	/ShipmentConfirmResponse/ShipmentCharges/TotalCharges	Yes	One	Container	N/A	N/A	
CurrencyCode	/ShipmentConfirmResponse/ShipmentCharges/TotalCharges/CurrencyCode	Yes	One	String	3	Total charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentConfirmResponse/ShipmentCharges/TotalCharges/MonetaryValue	Yes	One	String	1..19	Total charges value amount.	Valid values are from 0 to 999999999999999.99
BillingWeight	/ShipmentConfirmResponse/BillingWeight	Yes	One	Container	N/A	N/A	
UnitOfMeasurement	/ShipmentConfirmResponse/BillingWeight/UnitOfMeasurement	Yes	One	Container	N/A	N/A	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
Code	/ShipmentConfirmResponse/BillingWeight/UnitOfMeasurement/Code	Yes	One	String	2..3	Billing Weight unit of measurement code. The unit of measurement used in Shipment Confirm Request is returned.	
Description	/ShipmentConfirmResponse/BillingWeight/UnitOfMeasurement/Description	No	One	String	3	Description of the billing weight measurement units. Valid values are: KGS or LBS	
Weight	/ShipmentConfirmResponse/BillingWeight/Weight	Yes	One	String	8	Billing weight. Higher of the actual shipment weight versus the shipment dimensional weight.	Valid value up to 99999.99
ShipmentIdentificationNumber	/ShipmentConfirmResponse/ShipmentIdentificationNumber	Yes	One	String	18	Returned UPS shipment ID number.	1Z Number of the first package in the shipment.
ShipmentDigest	/ShipmentConfirmResponse/ShipmentDigest	Yes	One	Encoded	Variable length	Encoded shipment parameters required to be passed in the accept phase.	
NegotiatedRates	/ShipmentConfirmResponse/NegotiatedRates	No	One	Container	N/A	N/A	
NetSummaryCharges	/ShipmentConfirmResponse/NegotiatedRates/NetSummaryCharges	Cond	One	Container	N/A	Negotiated Rates info. Net Summary Charges are only returned for shipper account/UserId combinations qualified for Negotiated rates.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
GrandTotal	/ShipmentConfirmResponse/NegotiatedRates/NetSummaryCharges/GrandTotal	Cond	One	Container	N/A	N/A	
CurrencyCode	/ShipmentConfirmResponse/NegotiatedRates/NetSummaryCharges/GrandTotal/CurrencyCode	Yes	One	String	3	Net Summary charges currency code type.	
MonetaryValue	/ShipmentConfirmResponse/NegotiatedRates/NetSummaryCharges/GrandTotal/MonetaryValue	Yes	One	String	1..19	Net Summary charges monetary value.	Valid values are from 0 to 99999999999999999.99

1.8.5 Shipment Accept Request

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ShipmentAcceptRequest	/ShipmentAcceptRequest	Yes	One	Container	N/A	N/A	
Request	/ShipmentAcceptRequest/Request	Yes	One	Container	N/A	ShipAccept request	
RequestAction	/ShipmentAcceptRequest/Request/RequestAction	Yes	One	String	10	Indicates the action to be taken by the XML service.	Must be ShipAccept.
TransactionReference	/ShipmentAcceptRequest/Request/TransactionReference	No	One	Container	N/A	TransactionReference identifies transactions between client and server.	
CustomerContext	/ShipmentAcceptRequest/Request/TransactionReference/CustomerContext	No	One	String	1..50	Customer context	
ShipmentDigest	/ShipmentAcceptRequest/ShipmentDigest	Yes	One	String	unbounded	Encoded shipment parameters required to be passed in the accept phase.	

1.8.6 Shipment Accept Response

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ShipmentAcceptResponse	/ShipmentAcceptResponse	Yes	One	Container	N/A	N/A	
Response	/ShipmentAcceptResponse/Response	Yes	One	Container	N/A	ShipAccept response	
TransactionReference	/ShipmentAcceptResponse/Response/TransactionReference	Yes	One	Container	N/A	N/A	
CustomerContext	/ShipmentAcceptResponse/Response/TransactionReference/CustomerContext	No	One	String	1..512	The client uses CustomerContext to synchronize request/response pairs. The client establishes CustomerContext, which can contain any information you want, as long as it is valid XML; it is echoed back by the server.	
ResponseStatusCode	/ShipmentAcceptResponse/Response/ResponseStatusCode	Yes	One	String	1	Identifies the success or failure of the transaction. 1 = Successful; 0 = Failure	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ResponseStatusDescription	/ShipmentAcceptResponse/Response/ResponseStatusDescription	Yes	One	String	1..10	Describes Response Status Code. Returns text of Success or Failure	
Error	/ShipmentAcceptResponse/Response/Error	Yes	One	Container	N/A	If an error is encountered during the interchange, the Response contains an error. If the error is present, then the ErrorSeverity and ErrorCode are required.	
ErrorSeverity	/ShipmentAcceptResponse/Response/Error/ErrorSeverity	Yes	One	String	1..15	Describes the severity of the error. Transient Error - Customers data has not been processed due to system unavailability. The customer has to wait and try again. Hard Error - The error was encountered processing the customer's data and that the data needs correction. Warning - The customer's data was successfully processed; however, there were warnings encountered during processing.	
ErrorCode	/ShipmentAcceptResponse/Response/Error/ErrorCode	Yes	One	String	1..15	A numeric value that describes the error. Each API defines a range of error codes.	
ErrorDescription	/ShipmentAcceptResponse/Response/Error/ErrorDescription	Yes	One	String	1..50	Describes the error code.	
MinimumRetrySeconds	/ShipmentAcceptResponse/Response/Error/MinimumRetrySeconds	Yes	One	String	1..5	Number of seconds to wait until retry. This field is populated on special conditions of the Transient Error only, as defined by the service. A number between 1 and 86400 (24 hours)	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ErrorLocation	/ShipmentAcceptResponse/Response/Error/ErrorLocation	Yes	One	Container	N/A	Identifies the element in error.	
ErrorLocationElementName	/ShipmentAcceptResponse/Response/Error/ErrorLocation/ErrorLocationElementName	Yes	One	String	1..50	The XPATH name of the element in error. This is a valid XPATH pointing to an element in the request document.	
ErrorLocationAttributeName	/ShipmentAcceptResponse/Response/Error/ErrorLocation/ErrorLocationAttributeName	Yes	One	String	1..50	The name of the attribute in error. This is the name of the attribute contained by the Error Location Element.	
ErrorDigest	/ShipmentAcceptResponse/Response/Error/ErrorDigest	Yes	One	String	size of the Request data.	The contents of the element in error.	
ShipmentResults	/ShipmentAcceptResponse/ShipmentResults	Yes	One	Container	N/A	N/A	
ShipmentCharges	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges	Cond	One	Container	N/A	Shipment charges info. Shipment charges are only guaranteed to be returned for shipments whose origin country is US or Puerto Rico.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
RateChart	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/RateChart	Cond	1	String	1	Rate Type With which Shipment is rated. Possible RateChart values for different regions will be: US 48 origin: 1 – Daily Rates, 3 – Standard List Rates, 4 – Retail Rates Alaska/Hawaii origin: 1 – Daily Rates, 3 – Daily Rates, 4 – Retail Rates All Other origins: 1 – Rates 3 and 4 do not apply	
TransportationCharges	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/TransportationCharges	Yes	One	Container	N/A	N/A	
CurrencyCode	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/TransportationCharges/CurrencyCode	Yes	One	String	3	Transportation charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/TransportationCharges/MonetaryValue	Yes	One	String	1..19	Transportation and surcharges value amount.	Valid values are from 0 to 999999999999999999
ServiceOptionsCharges	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/ServiceOptionsCharges	Yes	One	Container	N/A	N/A	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
CurrencyCode	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/ServiceOptionsCharges/CurrencyCode	Yes	One	String	3	Accessorial charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/ServiceOptionsCharges/MonetaryValue	Yes	One	String	1..19	Accessorial charges value amount.	Valid values are from 0 to 9999999999999999.99
TotalCharges	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/TotalCharges	Yes	One	Container	N/A	N/A	
CurrencyCode	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/TotalCharges/CurrencyCode	Yes	One	String	3	Total charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentAcceptResponse/ShipmentResults/ShipmentCharges/TotalCharges/MonetaryValue	Yes	One	String	1..19	Total charges value amount.	Valid values are from 0 to 9999999999999999.99
NegotiatedRates	/ShipmentAcceptResponse/ShipmentResults/NegotiatedRates	Cond	One	Container	N/A	N/A	
NetSummaryCharges	/ShipmentAcceptResponse/ShipmentResults/NegotiatedRates/NetSummaryCharges	Cond	One	Container	N/A	Account Based Rates info. Net Summary Charges are only returned for ABR eligible shipper account/UserId combinations when the user includes the NegotiatedRates indicator in the ShipConfirm request.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
GrandTotal	/ShipmentAcceptResponse/ShipmentResults/NegotiatedRates/NetSummaryCharges/GrandTotal	Yes	One	Container	N/A	N/A	
CurrencyCode	/ShipmentAcceptResponse/ShipmentResults/NegotiatedRates/NetSummaryCharges/GrandTotal/CurrencyCode	*Yes	One	String	3	Net Summary charges currency code.	
MonetaryValue	/ShipmentAcceptResponse/ShipmentResults/NegotiatedRates/NetSummaryCharges/GrandTotal/MonetaryValue	*Yes	One	String	1..19	Net Summary charges monetary value.	Valid values are from 0 to 999999999999999999.99
BillingWeight	/ShipmentAcceptResponse/ShipmentResults/BillingWeight	Yes	One	Container	N/A	N/A	
UnitOfMeasurement	/ShipmentAcceptResponse/ShipmentResults/BillingWeight/UnitOfMeasurement	Yes	One	Container	N/A	N/A	
Code	/ShipmentAcceptResponse/ShipmentResults/BillingWeight/UnitOfMeasurement/Code	Yes	One	String	2..3	Billing weight unit of measurement code. The unit of measurement used in ShipmentConfirmRequest is returned.	
Description	/ShipmentAcceptResponse/ShipmentResults/BillingWeight/UnitOfMeasurement/Description	No	One	String	3	Description of the billing weight measurement units. Values are: KGS or LBS	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
Weight	/ShipmentAcceptResponse/ShipmentResults/BillingWeight/Weight	Yes	One	String	8	Billing weight. Higher of the actual shipment weight versus the shipment dimensional weight.	
ShipmentIdentificationNumber	/ShipmentAcceptResponse/ShipmentResults/ShipmentIdentificationNumber	Yes	One	String	18	Returned UPS shipment ID number.	1Z Number of the first package in the shipment.
ControlLogReceipt	/ShipmentAcceptResponse/ShipmentResults/ControlLogReceipt	Cond	One	Container	N/A	Container for the High Value reports	When forward shipments declared value between \$999 and \$50,000 USD. Two copies of high value report needs to be printed out.
ImageFormat	/ShipmentAcceptResponse/ShipmentResults/ControlLogReceipt/ImageFormat	Cond	One	Container	N/A	Container for the High Value report format, required if parent exist	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
Code	/ShipmentAcceptResponse/ShipmentResults/ControlLogReceipt/ImageFormat/Code	Yes*	One	String	4	Code for the type of Graphic Image for the High Value Report.	Values are: EPL = EPL2 (when user requests label in EPL2 format) SPL = SPL (when user requests label in SPL format) ZPL = ZPL (when user requests label in ZPL format) HTML= HTML (when user requests label in HTML format)
Description	/ShipmentAcceptResponse/ShipmentResults/ControlLogReceipt/ImageFormat/Description	No	One	String	1..35	Description of the format code	
GraphicImage	/ShipmentAcceptResponse/ShipmentResults/ControlLogReceipt/GraphicImage	Yes*	One	Base 64 Encoded	unbounded	Base 64 encoded html, EPL2, ZPL or SPL image	
PackageResults	/ShipmentAcceptResponse/ShipmentResults/PackageResults	No	Many (up to 200)	Container	N/A	Returned Package Information.	
TrackingNumber	/ShipmentAcceptResponse/ShipmentResults/PackageResults/TrackingNumber	Yes	One	String	18	Package 1Z number.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ServiceOptionsCharges	/ShipmentAcceptResponse/ShipmentResults/PackageResults/ServiceOptionsCharges	Cond	One	Container	N/A	Shipment charges info. Shipment charges are only guaranteed to be returned for shipments whose origin country is US or Puerto Rico.	
CurrencyCode	/ShipmentAcceptResponse/ShipmentResults/PackageResults/ServiceOptionsCharges/CurrencyCode	Yes	One	String	3	Package accessorial charges currency code type. The currency code used in the ShipmentConfirmRequest is returned.	
MonetaryValue	/ShipmentAcceptResponse/ShipmentResults/PackageResults/ServiceOptionsCharges/MonetaryValue	Yes	One	String	1..19	Package accessorial charges value amount.	Valid values are from 0 to 999999999999999999.
LabelImage	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage	Cond	One	Container	N/A	The container for UPS shipping label	Shipment without return service or with PRL return service.
LabelImageFormat	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/LabelImageFormat	Yes	One	Container	N/A	N/A	
Code	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/LabelImageFormat/Code	Yes	One	String	3	Label image code that the labels are generated. Values EPL = EPL2, SPL = SPL, ZPL = ZPL, GIF = gif images, or PNG for PNG images.	Only EPL, SPL, ZPL and GIF are currently supported.
Description	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/LabelImageFormat/Description	No	One	String	1..35	Description of the label image format code.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
GraphicImage	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/GraphicImage	Yes	One	String	unbounded	Base 64 encoded graphic image.	
InternationalSignatureGraphicImage	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/InternationalSignatureGraphicImage	Cond	One	String	unbounded	Base 64 encoded graphic image of the Warsaw text and signature box.	EPL2, ZPL and SPL labels. The image will be returned for non-US based shipments. One image will be given per shipment and it will be in the first PackageResults container.
HTMLImage	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/HTMLImage	Cond	One	String	unbounded	Base 64 encoded html browser image rendering software.	This is only returned for gif and png image formats.
PDF417	/ShipmentAcceptResponse/ShipmentResults/PackageResults/LabelImage/PDF417	Cond	One	String	unbounded	PDF-417 is a two-dimensional barcode, which can store up to about 1,800 printable ASCII characters or 1,100 binary characters per symbol. The symbol is rectangular. The image is Base 64 encoded and returned if the LabelImageFormat code is GIF	Shipment with PRL return service only
Receipt	/ShipmentAcceptResponse/ShipmentResults/PackageResults/Receipt	Cond	One	Container	N/A	Container for the receipt and the receipt link.	Not supported for ERL or PRL shipments.
Image	/ShipmentAcceptResponse/ShipmentResults/PackageResults/Receipt/Image	Cond	One	Container	N/A	Container for the receipt of a return shipment	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
ImageFormat	/ShipmentAcceptResponse/ShipmentResults/PackageResults/Receipt/Image/ImageFormat	Yes*	One	Container	N/A	Container for a receipt format	
Code	/ShipmentAcceptResponse/ShipmentResults/PackageResults/Receipt/Image/ImageFormat/Code	Yes*	One	String	4	Code representing the format in which a receipt is returned. Valid values: HTML = HTML format	
Description	/ShipmentAcceptResponse/ShipmentResults/PackageResults/Receipt/Image/ImageFormat/Description	No	One	String	1..35	Description of the image format code.	
GraphicImage	/ShipmentAcceptResponse/ShipmentResults/PackageResults/Receipt/Image/GraphicImage	Yes*	One	String	unbounded	Base 64 encoded PRL receipt in HTML format	
USPSPICNumber	/ShipmentAcceptResponse/ShipmentResults/PackageResults/USPSPICNumber	Cond	One	string	unbounded	USPSPICNumber is USPS Package Identification code which is returned at package level for UPS Returns Flexible Access Shipments.	
Form	/ShipmentAcceptResponse/ShipmentResults/Form	Cond	One	Container	N/A	Container tag for the International forms image	
Code	/ShipmentAcceptResponse/ShipmentResults/Form/Code	*Yes	One	String	2	Code that indicates the type of form	Possible Values 01 - All Requested International Forms

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
Description	/ShipmentAcceptResponse/ShipmentResults/Form/Description	*Yes	One	String	1...35	Description that indicates the type of form	Possible Values All Requested International Forms
Image	/ShipmentAcceptResponse/ShipmentResults/Form/Image	Cond	One	Container	N/A	Container tag for the International forms image	
ImageFormat	/ShipmentAcceptResponse/ShipmentResults/Form/Image/ImageFormat	Cond	One	Container	N/A	Container tag for the International forms image format information	
Code	/ShipmentAcceptResponse/ShipmentResults/Form/Image/ImageFormat/Code	Cond	One	String	3	Code representing the format in which the forms are generated Possible Values PDF = pdf	Only PDF is supported currently
Description	/ShipmentAcceptResponse/ShipmentResults/Form/Image/ImageFormat/Description	No	One	String	1..35	Description of the form image format code.	
GraphicImage	/ShipmentAcceptResponse/ShipmentResults/Form/Image/GraphicImage	Cond	One	Base 64 Encoded	unbounded	Base 64 encoded International forms image	
FormGroupId	/ShipmentAcceptResponse/ShipmentResults/Form/FormGroupId	Cond One	One	String	1..26	Unique Id for later retrieval of saved version of the completed international forms.	Always returned when code = 01. 01 represents international forms.

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
FormGroupIdName	/ShipmentAcceptResponse/ShipmentResults/Form/FormGroupIdName	No	One	String	1...50	Contains description text which identifies the group of International forms. This element is part of both request and response. This element does not appear on the forms.	
CODTurnInPage	/ShipmentAcceptResponse/ShipmentResults/CODTurnInPage	No	One	Container	N/A	The container for COD Turn In Page. COD info block is included in HTML label instruction. Only supports HTML format. Only supports EU countries.	
Image	/ShipmentAcceptResponse/ShipmentResults/CODTurnInPage/Image	*Yes	One	Container	N/A	The container of the image for COD Turn In Page.	
ImageFormat	/ShipmentAcceptResponse/ShipmentResults/CODTurnInPage/Image/ImageFormat	*Yes	One	Container	N/A	The container for format of COD Turn In Page	
Code	/ShipmentAcceptResponse/ShipmentResults/CODTurnInPage/Image/ImageFormat/Code	*Yes	One	String	4	Format code of the generated COD Turn In Page. Valid values: HTML = HTML format	Only HTML format is supported for COD Turn In Page.
Description	/ShipmentAcceptResponse/ShipmentResults/CODTurnInPage/Image/ImageFormat/Description	No	One	String	1...35	Description of the format code of generated COD Turn In page.	
GraphicImage	/ShipmentAcceptResponse/ShipmentResults/CODTurnInPage/Image/GraphicImage	*Yes	One	Base 64 Encoded	unbounded	Base 64 encoded html browser image rendering software.	

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules

GraphicImage	/ShipmentAcceptResponse/ShipmentResults/HighValueReport /Image/GraphicImage	Yes	1	String			

Name	XPath	Required	Max Allowed	Type	Length	Description	Validation Rules
LabelURL	/ShipmentAcceptResponse/ShipmentResults/LabelURL	Yes	One	String	unbounded	LabelURL is returned only if the LabelLinksIndicator is requested for an ImportControl shipment or for a Return shipment. URL will point to a label and can also point to HighValueReport, CustomsInvoice and ImportControl instructions.	
LocalLanguageLabelURL	/ShipmentAcceptResponse/ShipmentResults/LocalLanguageLabelURL	Yes	One	String	unbounded	LocalLanguageLabelURL is returned only if the LabelLinksIndicator is requested for an ImportControl shipment or for a Return shipment. URL will point to a label and can also point to HighValueReport, CustomsInvoice and ImportControl instructions in the Country's local language if supported by UPS.	
ReceiptURL	/ShipmentAcceptResponse/ShipmentResults/ReceiptURL	Yes	One	String	unbounded	ReceiptURL is returned if the LabelLinksIndicator is requested for an ImportControl shipment or a Return shipment.	
LocalLanguageReceiptURL	/ShipmentAcceptResponse/ShipmentResults/LocalLanguageReceiptURL	Yes	One	String	unbounded	LocalLanguageReceiptURL is returned if the LabelLinksIndicator is requested for an ImportControl shipment or a Return shipment. The URL will contain the receipt in the Country's local language if supported by UPS.	

1.9 The Void XML Reference

This section documents the details of the XML messages, including the requests that clients send to UPS and the responses that UPS returns. The first subsection explains the notation that this section uses. It is followed by a section that describes how UPS verifies that client applications are authorized to use the API. The next subsections define the messages used by the API for its services. The final subsection provides a list of error codes.

1.9.1 Describing XML Messages

As noted previously, all messages that UPS APIs send and receive consist of XML documents. This reference section defines the specific elements within those XML documents.

1.9.2 Authenticating Client Applications

UPS Shipping Services are only available for authorized UPS customers. To enforce this policy, UPS requires that every message that a client application sends include important authentication information. That information is contained in an AccessRequest XML document that must begin each message.

1.9.1 Void Shipment Request

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION	VALIDATION RULES
VoidShipmentRequest	/VoidShipmentRequest	Yes	1	Container	N/A	N/A	
Request	/VoidShipmentRequest /Request	Yes	1	Container	N/A	N/A	
RequestAction	/VoidShipmentRequest/Request/Request Action	Yes	1	String	1	Indicates the action to be taken by the XML service. 1 = Void the shipment.	Currently, there is only 1 valid RequestAction value.
TransactionReference	/VoidShipmentRequest /Request/Transaction Reference	Yes	1	Container	N/A	TransactionReference identifies transactions between client and server.	
CustomerContext	/VoidShipmentRequest /Request/Transaction Reference/CustomerContext		1	String	1..512	The client uses CustomerContext to synchronize request /response pairs. The client establishes Customer Context, which can contain any information you want, as long as it is valid XML; it is echoed back by the server.	
ShipmentIdentificationNumber	/VoidShipmentRequest /ShipmentIdentification Number	Cond	1	String	18	The shipment's identification number	Must pass 1Z rules. Must be upper case This element is mutually exclusive with the Expanded Void Shipment node.
ExpandedVoidShipment	/VoidShipmentRequest /ExpandedVoidShipment	Cond	1	Container	N/A	Expanded Void Capability	This element is mutually exclusive with the Void Shipment Request/ Shipment IdentificationNumber.

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION	VALIDATION RULES
ShipmentIdentificationNumber	/VoidShipmentRequest /ExpandedVoidShipment /ShipmentIdentificationNumber	Yes	1	String	18	The shipment's identification number	Must pass 1Z rules . Must be upper case
TrackingNumber	/VoidShipmentRequest /ExpandedVoidShipment /TrackingNumber	No Zero to Many	unbounded	String	18	The package's identification number	Must pass 1Z rules. Must be upper case.

1.9.2 Void Shipment Response

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION	VALIDATION RULES
VoidShipmentResponse	/VoidShipmentResponse	Yes	1	Container	N/A	N/A	
Response	/VoidShipmentResponse/Response	Yes	1	Container	N/A	Contains Errors information tags along with the success/fail status of the void request.	
TransactionReference	/VoidShipmentResponse/Response/TransactionReference	Yes	1	Container	N/A	N/A	
CustomerContext	/VoidShipmentResponse/Response/TransactionReference/CustomerContext	No	1	String	0..512	Customer provided data. May be XML. If this data is present in the request, it is echoed back to the customer.	
XpciVersion	/VoidShipmentResponse/Response/TransactionReference/XpciVersion	No	1	String	1..50	Identifies the version of the message. Current version is 1.0001	
ResponseStatusCode	/VoidShipmentResponse/Response/ResponseStatusCode	Yes	1	String		Identifies the success or failure of the interchange. 1 = Success 0 = Failure	
ResponseStatusDescription	/VoidShipmentResponse/Response/ResponseStatusCode/ResponseStatusDescription	No	1	String	1..15	Describes the Response Status Code.	
Error	/VoidShipmentResponse/Response/Error	No	1	Container	N/A	If an error is encountered during the interchange, the Response contains an error. If the error is present, then the ErrorSeverity and ErrorCode are required.	

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION	VALIDATION RULES
ErrorSeverity	/VoidShipmentResponse/Response/Error/ErrorSeverity	Yes	1	String	1..15	Describes the severity of the error.	
ErrorCode	/VoidShipmentResponse/Response/Error/ErrorCode	Yes	1	String	1..15	A numeric value that describes the error.	
ErrorDescription	/VoidShipmentResponse/Response/Error/Description	No	1	String	1..50	Describes the error code.	
MinimumRetrySeconds	/VoidShipmentResponse/Response/Error/MinimumRetrySeconds	No	1	String	1..10		
ErrorLocation	/VoidShipmentResponse/Response/Error/ErrorLocation	No	1	Container	N/A	Identifies the element in error.	
ErrorLocationElementName	/VoidShipmentResponse/Response/Error/ErrorLocation/ErrorLocationElementName	No	1	String	1..512	The Xpath name of the element in error. This is a valid Xpath pointing to an element in the request document.	
ErrorLocationAttributeName	/VoidShipmentResponse/Response/Error/ErrorLocation/ErrorLocationAttributeName	No	1	String	1..50	The name of the attribute in error. This is the name of the attribute contained by the Error Location element.	
ErrorDigest	/VoidShipmentResponse/Response/Error/ErrorDigest	No	1	String	by the size of the Request data.	The contents of the element in error.	
Status	/VoidShipmentResponse/Status	No	1	Container	N/A	Contains Status information tags.	

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION	VALIDATION RULES
StatusType	/VoidShipmentResponse/Status/StatusType	Yes	1	Container	N/A	Contains the status type tags.	
Code	/VoidShipmentResponse/Status/StatusType/Code	Yes	1	String		A numeric value that describes the status type . 1 = Success 0 = Failure	
Description	/VoidShipmentResponse/Status/StatusType/Description	No	1	String	1..15	A text description of the status type.	
StatusCode	/VoidShipmentResponse/Status/StatusCode	Yes	1	Container	N/A	Contains the status code tags.	
Code	/VoidShipmentResponse/Status/StatusCode/Code	Yes	1	String		The Shipment level void status code. A numeric value that describes the status code. 2 = Partially Voided 1 = Success or Voided 0 = Failure	The Voided and Partially Voided status codes are only returned in association with the expanded void functionality.
Description	/VoidShipmentResponse/Status/StatusCode/Description	*Yes	1	String	1..15	A text description of the status code.	
PackageLevelResults	/VoidShipmentResponse/PackageLevelResults	No Zero to Many	unbounded	Container	N/A	Contains the Package Level Results For the expanded void functionality only.	This node will be returned for package level voids and partially voided shipments.
TrackingNumber	/VoidShipmentResponse/PackageLevelResults/TrackingNumber	*Yes	1	String	18	The package's identification number	

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION	VALIDATION RULES
StatusCode	/VoidShipmentResponse/Packa geLevelResults/StatusCode	*Yes	1	String	1	The Package Level void status code. A numeric value that describes the status code. 1 = Voided or Already Voided 0 = Not Voided	
Description	/VoidShipmentResponse/Packa geLevelResults/Description	*Yes	1	String	1..15	A text description of the status code.	

1.10 Understanding XML Label Recovery Services

For up to 30 days after customers schedule return shipments, UPS maintains a copy of the shipping labels for the returned package. If customers need to print additional copies of return labels, the Label Recovery Shipping API can retrieve those labels.

Merchants typically provide this functionality on their own web site. Their customers access the merchant's web site, which acts as an intermediary on their behalf to retrieve the label from UPS.

1.11 The Label Recovery XML Reference

This section documents the details of the XML messages, including the requests that clients send to UPS and the responses that UPS returns. The first subsection explains the notation that this section uses. It is followed by a section that describes how UPS verifies that client applications are authorized to use the API. The next subsections define the messages used by the API for its services. The final subsection provides a list of error codes.

1.11.1 Describing XML Messages

As noted previously, all messages that UPS APIs send and receive consist of XML documents. This reference section defines the specific elements within those XML documents.

1.11.2 Authenticating Client Applications

UPS Shipping Services are only available for authorized UPS customers. To enforce this policy, UPS requires that every message that a client application sends include important authentication information. That information is contained in an AccessRequest XML document that must begin each message.

1.11.3 Label Recovery Request

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION/ VALIDATION RULES
LabelRecoveryRequest	/LabelRecoveryRequest	Yes One	1	Container	N/A	Only available for ERL return types
Request	/LabelRecoveryRequest/Request	Yes One	1	Container	N/A	N/A
TransactionReference	/LabelRecoveryRequest/Request/TransactionReference	No One	1	Container	N/A	TransactionReference identifies transactions between client and server.
RequestAction	/LabelRecoveryRequest/Request/RequestAction	Yes One	1	String	1..2	Indicates the action to be taken by the XML service. Must be 'LabelRecovery'.
LabelSpecification	/LabelRecoveryRequest/LabelSpecification	No Zero to One	1	Container	N/A	Container used to define the properties required by the user to print and/or display the label.
HTTPUserAgent	/LabelRecoveryRequest/LabelSpecification/HTTPUserAgent	No	1	String	1..64	Browser HTTPUserAgentString. This is the preferred way of identifying GIF image type to be generated. If not specified, default to Mozilla/4.5
LabelImageFormat	/LabelRecoveryRequest/LabelSpecification/LabelImageFormat	No	1	Container	N/A	The file format of the label and receipt. Default to HTML format if this node not exist

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION/ VALIDATION RULES
Code	/LabelRecoveryRequest /LabelSpecification/LabelImageFormat/Code	No	1	String	3	File type that the label and receipt is to be generated in. Valid values are: 'GIF' -- The generated label and receipt are in HTML format. 'PDF' -- The generated label and receipt are in PDF format. If the Label contains Customs Invoice then the Label and receipt will always be returned in PDF format.
Translate	/LabelRecoveryRequest/Translate	No Zero to Many	1	Container	N/A	Translate container allows the user to specify the language he/she would like a specific portion of response to return. The language is specified by the combination of language code and dialect code. Valid combinations are: LanguageCode + DialectCode. Languages: eng GB = Queen's English. Spa 97 = Castilian Spanish. ita 97 = Italian. fra 97 = France French. fra CA = Canadian French . deu 97 = German . por 97 = Portugal Portuguese. nld 97 = Dutch. dan 97 = Danish. fin 97 = Finnish. swe 97 = Swedish. eng CA = Canadian English. Eng US = US English. Default language is Queen's English. If the Ship from country is Canada, the Language defaults to Canadian English. If the ship from country is US, the language defaults to US English. If shipping from some other country, the language defaults to Queens English.
LanguageCode	/LabelRecoveryRequest/Translate/LanguageCode	Yes One	1	String	2..3	The Language code. The language codes are three letter language codes. Supported languages are: eng - Englishspa - Spanishita - Italianfra - Frenchdeu - Germanpor - Portuguesenld - Dutchdan - Danishfin - Finnishswe - Swedishnor - Norwegian
DialectCode	/LabelRecoveryRequest/Translate/DialectCode	Yes One	1	String	2	Valid dialect codes are: CA - CanadaGB - Great Britain97 – Not Applicable US - United States
Code	/LabelRecoveryRequest/Translate/Code	Yes One	1	String	2	Used to specify what will be translated. Valid codes are: "01"Code Definitions: "01" = label direction instructions and receipt.
LabelDelivery	/LabelRecoveryRequest/LabelDelivery	No Zero or One	1	Container	N/A	Container for the Label Delivery accessorial. One Label Delivery per shipment
LabelLinkIndicator	/LabelRecoveryRequest /LabelDelivery/LabelLinkIndicator	No Zero or One	1	Empty	N/A	Indicates the Label Recovery and Receipt Recovery URL links are to be returned in the XML Response. Valid for shipments with a Web Return Label Return Service.

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION/ VALIDATION RULES
TrackingNumber	/LabelRecoveryRequest/TrackingNumber	Cond one	1	String	1..18	Package Tracking Number. If the TrackingNumber is not provided, then the ReferenceNumber/Value and ShipperNumber have to be provided.
ReferenceNumber	/LabelRecoveryRequest/ReferenceNumber	Yes	1	Container	N/A	N/A
Value	/LabelRecoveryRequest/ReferenceNumber/Value	Cond One	1	String	1..35	Required if TrackingNumber is not populated. Customer supplied reference number. Supports up to 2 customer supplied combinations of Reference code- value combinations.
ShipperNumber	/LabelRecoveryRequest/ShipperNumber	Cond One	1	String	6	Required if ReferenceNumber/Value is populated. Shipper's six digit account number. Must be six alphanumeric characters. Must be associated with the Internet account used to login.

1.11.4 Label Recovery Response

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION / VALIDATION RULES
LabelRecoveryResponse	/LabelRecoveryResponse	Yes One	1	Container	N/A	N/A
Response	/LabelRecoveryResponse/Response	Yes One	1	Container	N/A	N/A
TransactionReference	/LabelRecoveryResponse/Response/TransactionReference	Yes One	1	Container	N/A	N/A
CustomerContext	/LabelRecoveryResponse/Response/TransactionReference/CustomerContext	No	1	String	0..512	Customer provided data. May be XML. If this data is present in the request, it is echoed back to the customer.
XpciVersion	/LabelRecoveryResponse/Response/TransactionReference/XpciVersion	No	1	String	1..50	Identifies the version of the message. Current version is 1.0001
ResponseStatusCode	/LabelRecoveryResponse/Response/ResponseStatusCode	Yes	1	String	1	Identifies the success or failure of the interchange. 1 = Success 0 = Failure
ResponseStatusDescription	/LabelRecoveryResponse/Response/ResponseStatusDescription	No	1	String	1..15	Describes the Response Status Code.
Error	/LabelRecoveryResponse/Response/Error	No	1	Container	N/A	If an error is encountered during the interchange, the Response contains an error. If the error is present, then the ErrorSeverity and ErrorCode are required.

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION / VALIDATION RULES
ErrorSeverity	/LabelRecoveryResponse/Response/Error/ErrorSeverity	Yes	1	String	1..15	Describes the severity of the error. Refer to Table XXX
ErrorCode	/LabelRecoveryResponse/Response/Error/ErrorCode	Yes	1	String	1..15	A numeric value that describes the error. Each API defines a range of error codes. Refer to error conditions, in the appropriate chapter, for a complete list of interchange errors.
ErrorDescription	/LabelRecoveryResponse/Response/Error/ErrorDescription	No	1	String	1..50	Describes the error code.
MinimumRetrySeconds	/LabelRecoveryResponse/Response/Error/MinimumRetrySeconds	No	1	String	1..5	Number of seconds to wait until retry. This field is populated on special conditions of the Transient Error only, as defined by the service. A number between 1 and 86400 (24 hours)
ErrorLocation	/LabelRecoveryResponse/Response/Error/ErrorLocation	No	1	Container	N/A	Identifies the element in error.
ErrorLocationElementName	/LabelRecoveryResponse/Response/Error/ErrorLocation/ErrorLocationElementName	No	1	String	1..512	The Xpath name of the element in error. This is a valid Xpath pointing to an element in the request document.
ErrorLocationAttributeName	/LabelRecoveryResponse/Response/Error/ErrorLocation/ErrorLocationAttributeName	No	1	String	1..50	The name of the attribute in error. This is the name of the attribute contained by the Error Location element.
ErrorDigest	/LabelRecoveryResponse/Response/Error/ErrorDigest	No	1	Alphanumeric	Bound by the size of the Request data.	The contents of the element in error.
ShipmentIdentificationNumber	/LabelRecoveryResponse/ShipmentIdentificationNumber	Yes One	1	String	18	Tracking number of the leading package in the shipment

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION / VALIDATION RULES
LabelResults	/LabelRecoveryResponse/LabelResults	No One	1	Container	N/A	Information containing the results of the users Label Recovery Request.
TrackingNumber	/LabelRecoveryResponse/LabelResults/TrackingNumber	Yes One	1	String	18	Package Tracking number.
LabelImage	/LabelRecoveryResponse/LabelResults/LabelImage	Yes One	1	Container	N/A	The elements needed to render a label on a printer or in a browser. Specifies the format in which GraphicImage is represented. If LabelImageFormat is GIF, LabelImage contains GraphicImage and HTMLImage. Otherwise, it contains only GraphicImage. If LabelImageFormat is PDF, LabelImage is only returned at the first package result. If entered in the request, the response mirrors, else the default values are returned.
LabelImageFormat	/LabelRecoveryResponse/LabelResults/LabelImage/LabelImageFormat	Yes One	1	Container	N/A	The format of a label image byte stream.
Code	/LabelRecoveryResponse/LabelResults/LabelImage/LabelImageFormat/Code	Yes One	1	String	3	Code type that the label image is to be generated in. Valid value returned is GIF or PDF
GraphicImage	/LabelRecoveryResponse/LabelResults/LabelImage/GraphicImage	Yes One	1	Base 64 Encoded	Unbounded	Base 64 encoded graphic image.
HTMLImage	/LabelRecoveryResponse/LabelResults/LabelImage/HTMLImage	Cond One	1	Base 64 Encoded	Unbounded	Base 64 encoded html browser image rendering software. This is only returned for GIF image formats.
PDF417	/LabelRecoveryResponse/LabelResults/LabelImage/PDF417	Cond Zero or One	1	Base 64 Encoded	Unbounded	PDF-417 is a two-dimensional barcode, which can store up to about 1,800 printable ASCII characters or 1,100 binary characters per symbol. The symbol is rectangular. The PDF417 image will be returned when the shipment is transborder and the service option is one of the following: StandardExpressSaverExpress PlusThe image is Base 64 encoded and only returned for GIF image format

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION / VALIDATION RULES
InternationalSignatureGraphicImage	/LabelRecoveryResponse/LabelResults/LabelImage/InternationalSignatureGraphicImage	Yes	1	String	Unbounded	Base 64 encoded graphic image of the Warsaw text and signature box.
URL	/LabelRecoveryResponse/LabelResults/LabelImage/URL	Cond	1	String	Unbounded	This is only returned if the label link is requested to be returned and only at the first package result
Receipt	/LabelRecoveryResponse/LabelResults/Receipt	Cond	1	Container	N/A	Container for the HTML receipt and the receipt link.
HTMLImage	/LabelRecoveryResponse/LabelResults/Receipt/HTMLImage	Cond	1	String	Unbounded	
Image	/LabelRecoveryResponse/LabelResults/Receipt/Image	Cond	1	Container	N/A	Container for the receipt in the format other than HTML.
ImageFormat	/LabelRecoveryResponse/LabelResults/Receipt/Image/ImageFormat	Yes 1	1	Container	N/A	Container for the format of the receipt
Code	/LabelRecoveryResponse/LabelResults/Receipt/Image/ImageFormat/Code	Yes	1	String	3	The file type of the receipt. Valid value is 'PDF'

NAME	XPATH	REQUIRED	MAX ALLOWED	TYPE	LENGTH	DESCRIPTION / VALIDATION RULES
GraphicImage	/LabelRecoveryResponse/LabelResults/Receipt/Image/GraphicImage	Yes One	1	Base 64 Encoded	Unbounded	Base 64 encoded graphic image.
TrackingCandidate	/LabelRecoveryResponse/TrackingCandidate	Cond	1	Container	N/A	Information containing the results of the users Label Recovery Request. Returned in the event the Shipper Number and Reference Number are supplied in the request.
TrackingNumber	/LabelRecoveryResponse/TrackingCandidate/TrackingNumber	Yes	1	String	18	Package Tracking number.
DestinationPostalCode	/LabelRecoveryResponse/TrackingCandidate/DestinationPostalCode	No	1	String	1..9	Destination Postal Code candidate.
DestinationCountryCode	/LabelRecoveryResponse/TrackingCandidate/DestinationCountryCode	No	1	String	2	Destination Country Code candidate.
PickupDateRange	/LabelRecoveryResponse/TrackingCandidate/PickupDateRange	No	1	Container	N/A	A range of time the package was picked up.
BeginDate	/LabelRecoveryResponse/TrackingCandidate/PickupDateRange/BeginDate	No	1	String	8	The beginning of the date range for the candidate.Format: YYYYMMDD
EndDate	/LabelRecoveryResponse/TrackingCandidate/PickupDateRange/EndDate	No	1	String	8	The end of the date range for the candidate..Format: YYYYMMDD

1.12 Customer Integration Environment

The Customer Integration Environment (CIE) allows customers to test their application prior to launch. This environment is intended for integration testing of customer applications with the UPS servers. No stress testing should ever be performed by customers against any UPS systems.

Once your application has been thoroughly tested, you should redirect the application to the UPS Production Environment.

Please note that while CIE maintains system availability 24 hours, 7 days each week, there are occasional system down times to allow for server maintenance.

1.12.1 Negotiated Rates

Negotiated Rates are available in the UPS Customer Integration Environment (CIE) and are returned when the Negotiated Rate indicator is provided in the ShipConfirm request. The Negotiated Rates returned do not reflect the contractual rate and may vary. (A flat 1% discount is returned)

Also in the Customer Integration Environment the shipper eligibility for Negotiated Rates is not fully verified. For shipper eligibility requirements refer to Negotiated Rates section within UPS Rates & Service Guide.

1.12.1.1 Shipping

Test your Shipping application using valid and invalid date elements including postal codes, weights and package types. This will ensure that your application has the ability to process success and error responses correctly.

1.12.1.2 Verifying Shipping Rates

Shipping rates quoted are estimates based on the information supplied. Other shipping charges may apply and the final shipping charge may differ depending upon UPS Account Number and how the package is tendered to UPS. Please see the applicable UPS Rate and Service Guide for details.

When comparing shipment charges between applications and API that provide UPS rates, be sure that the requests are identical. Working through any discrepancies will require knowledge of all parameters posted along with defaults, numeric rounding, and rate table used by the applications being compared.

For more information on UPS Services, refer to the UPS Service Guide at:

<http://www.ups.com/using/svc-index.html>.

You can check your results against the UPS Quick Cost Calculator™ web application located at:

<http://wwwapps.ups.com/servlet/QCCServlet>

1.12.2 Testing and Deploying Applications

UPS maintains a special environment to support testing and staging of applications that rely on UPS Developer APIs. This environment is called the Customer Integration Environment (CIE) and allows developers test and debug their applications by simulating transactions with UPS. The CIE site responds to requests just like the UPS production environment; however, it does not initiate actual UPS business services.

For example, if you send a shipping request to the UPS production site, a UPS driver may show up at your location expecting to pick up a package (and expecting payment for the service.) Sending the shipping request to CIE will avoid this problem.

For integration testing, you should direct your test shipping software to:

<https://wwwcie.ups.com/ups.app/xml/ShipConfirm>

<https://wwwcie.ups.com/ups.app/xml/ShipAccept>

1.12.2.1 System Availability

The Customer Integration Environment is available 24 hours a day, 7 days a week.

1.12.2.2 Server Availability Check

All of the UPS services work using HTTPS POST. Using the same URL as you point your application to, perform an HTTPS GET. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path. To see this in action, type the following URL in your web browser:

<https://wwwcie.ups.com/ups.app/xml/ShipConfirm>

<https://wwwcie.ups.com/ups.app/xml/ShipAccept>

The following will be returned:

Service Name: ShipConfirm

Remote User: null

Server Port: 443

Server Name: wwwcie.ups.com

Servlet Path: /ShipConfirm

1.12.3 UPS Product Exchange Service

Email Pre-alert notification will be sent with a custom text in case of exchange forward shipment, if user provided pre-alert notification Email in the request.

1.12.4 Production Access

NEW! UPS now grants both test and production access for the Shipping API immediately without any further requests. To use production environment just point to the Production URLs outlined below.

Prior to moving to the Production environment, you should verify that your XML is well-formed (successful responses) and be able to produce the following:

- Void Request
- High Value Report
- Label Recovery
- A proportional UPS Address label

Questions about your XML request and response need to be directed to API Technical Support. Please see section “Getting Technical Support”.

<Please refer to sample label at Appendix M as reference>

Once your testing is completed please direct your Shipping Package XML to the Production URL's:

<https://onlinetools.ups.com/ups.app/xml/ShipConfirm>

<https://onlinetools.ups.com/ups.app/xml/ShipAccept>

1.12.5 Label Verification for Contract Services

Returns Flexible Access (RFA) requires Label Certification. Please complete the steps noted below.

- Ask your Account Representative to submit a Label Testing Request Form to the Label Verification Group prior to submitting your RFA labels for review
- Request a UPS Return Label by sending an email with your pickup address to labelverify@ups.com
- Create 10 RFA shipments/labels with a return service code of PRL
- Submit the RFA labels to the Label Verification Group using the UPS provided Return Label

UPS will contact you via email within 5 business days to inform you of your approval status for RFA. Once granted, please direct your Shipping Package XML to the Production URL's:

<https://onlinetools.ups.com/ups.app/xml/ShipConfirm>

<https://onlinetools.ups.com/ups.app/xml/ShipAccept>

Note: UPS reserves the right to revoke shipping privileges from any customers who fail to abide by the Certification Requirements outlined above.

1.12.6 Other Shipping API

1.12.6.1 Voiding Package Shipments

Test your Void application using the set of 1Zs listed below:

NUMBER(S)	SCENARIO	EXPECTED RESULT
1Z12345E0390817264	Single package shipment sent via UPS Ground.	Request is processed, and shipment is voided.
NUMBER(S) SCENARIO EXPECTED RESULT 1Z12345E0193075279	Single package shipment sent via Next Day Air.	Request is processed, and shipment is voided.
1Z12345E0392508488	Single package shipment sent via UPS Ground for which the allotted time period for voiding the shipment has expired.	Error 190101, Time for voiding has expired.
1Z12345E1290420899	Shipment that has already been picked up by the UPS service provider.	Error 190103, A completed order cannot be voided.
1Z12345E0390856432	Shipment that can be voided at the shipment level.	A successful shipment voided XML response will be returned for a shipment level void request.
1Z12345E0193081456	Shipment that can be voided at the shipment level.	A successful shipment voided XML response will be returned for a shipment level void request.
1Z12345E1234567890, 1Z12345E1234567890	PLEASE NOTE: The two 1Zs are intentionally the same value. The first one is the Shipment Identifier. The second one is the Package Identifier. The intention of this test case is to prove one can void the lead package in a shipment and the Shipment ID will survive the void of the lead package.	A successful shipment partially voided XML response will be returned for a package level void request. The request will void only one of multiple packages in the shipment. The shipment will be "partially" voided.
1Z12345E2318693258, 1Z12345E0193072168	Multi-package shipment with all, save one, of the packages already voided. The request will void the remaining package.	A successful shipment voided XML response will be returned for a package level void request. The request will

NUMBER(S)	SCENARIO	EXPECTED RESULT
		void the only remaining package in the shipment. The shipment will be completely voided.
NUMBER(S) SCENARIO EXPECTED RESULT 1Z12345E1234567890, 1Z12345E8635481269, 1Z12345E1593518308	Multi-package shipment with a package that cannot be voided.	A successful shipment partially voided XML response will be returned for a package level void request. Tracking number 1Z12345E1593518308 will not be voided.
1Z12345E2318693258, 1Z12345E0390819985, 1Z12345E0193078563	Multi-package shipment with two packages that remain un-voided.	A successful shipment voided XML response will be returned for a package level void request. The request will void all of the remaining packages in the shipment. The shipment will be completely voided.
1Z12345E8793628675	A shipment uploaded more than 28 days previously.	A failed XML response will be returned. Error Code 190101, Time for voiding has expired.
1Z12345E1234567890, 1Z12345E0392508253	This tracking number does not belong to the shipment.	Package void will fail to void any packages when an invalid package tracking number is provided. A failed XML response will be returned. Error Code 190110, Invalid Package Void.
1Z12345E2318693258, 1Z12345E0392506486	Return shipment.	Return shipments cannot be voided at the package level. A failed XML response will be returned. Error Code 190112, Return Service Shipments cannot be Voided at the Package Level.

This will ensure that your application has the ability to process success and error responses correctly.

For integration testing, you should direct your test Void Package Shipment software to:

<https://wwwcie.ups.com/ups.app/xml/Void>

For production testing, you should direct your test Void Package Shipment software to:

<https://onlinetools.ups.com/ups.app/xml/Void>

1.12.6.2 Label Recovery

Test your Label Recovery application using the set of 1Zs listed below:

NUMBER(S)	SCENARIO	EXPECTED RESULT
1Z12345E8791315509	Label returned in PDF format	Request is processed, label returned in PDF format
1Z12345E8791315413	Label returned in html format	Request is processed, label returned in html format

This will ensure that your application has the ability to process PDF and html responses correctly.

For integration testing, you should direct your test Label Recovery software to:

<https://wwwcie.ups.com/ups.app/xml/LabelRecovery>

For production testing, you should direct your test Label Recovery software to:

<https://onlinetools.ups.com/ups.app/xml/LabelRecovery>

1.12.6.3 System Availability

The Customer Integration Environment is available 24 hours a day, 7 days a week.

1.12.6.4 Server Availability Check

All of the UPS services work using HTTPS POST. Using the same URL as you point your application to, perform an HTTPS GET. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path. To see this in action, type the following URL in your web browser:

<https://wwwcie.ups.com/ups.app/xml/Void>

The following will be returned:

Service Name: Void

Remote User: null

Server Port: 443

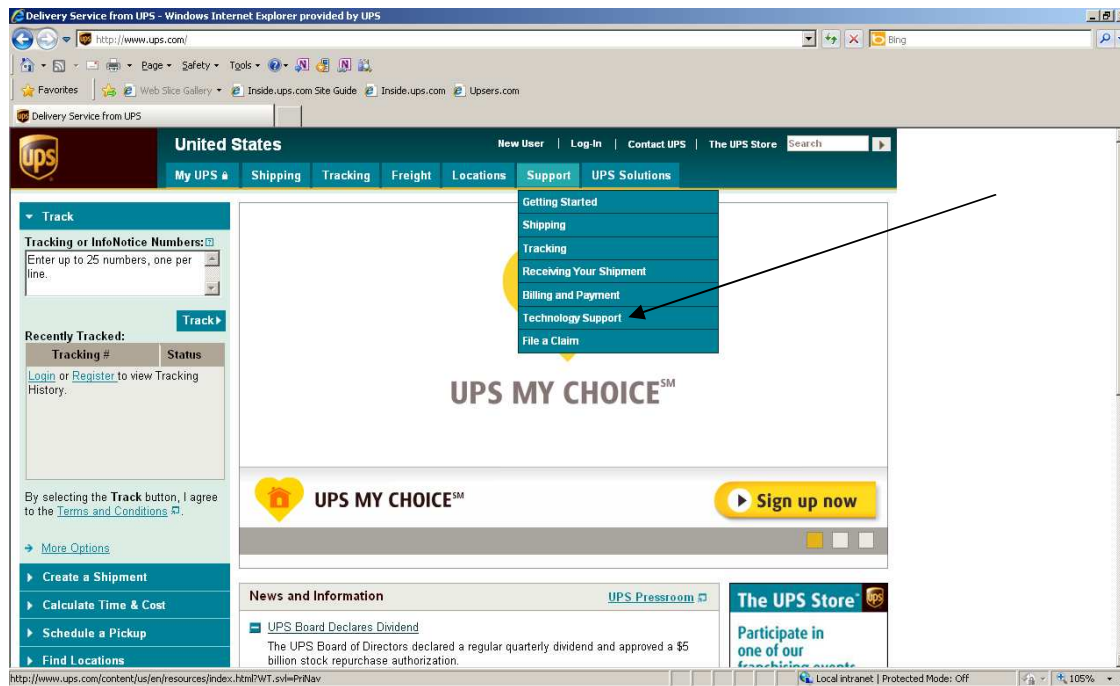

Server Name: wwwcie.ups.com

Servlet Path: /Void

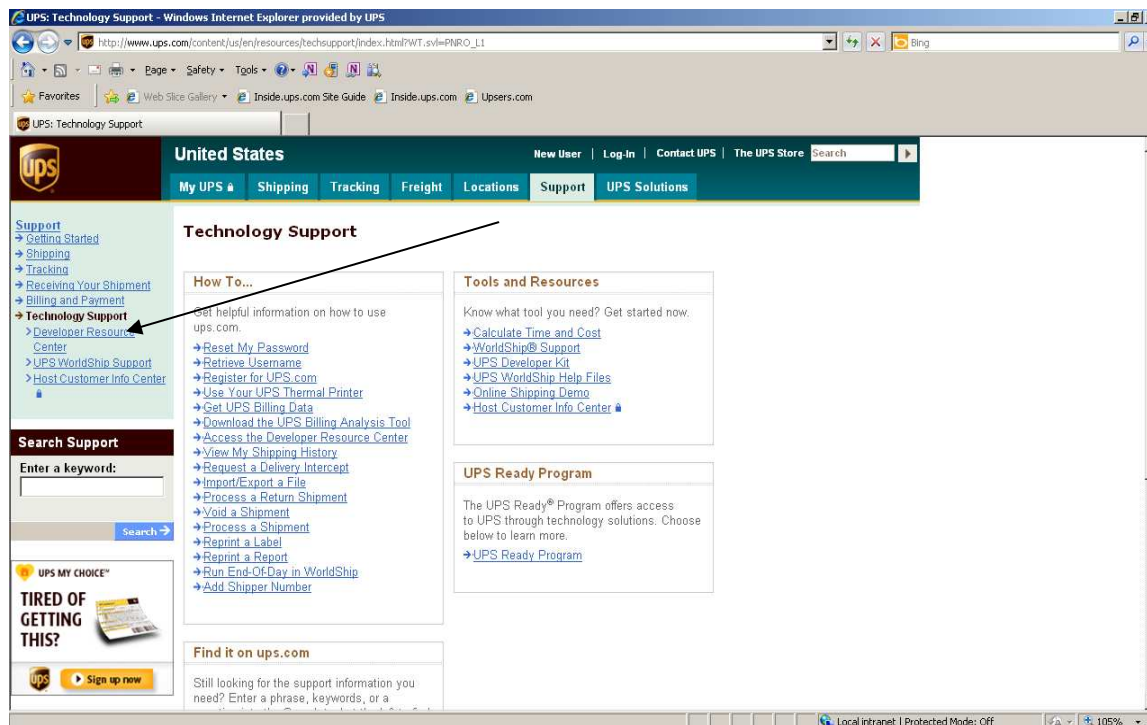

Appendix A- Accessing Tech Support (US Site Example)

Go to ups.com and log in to myUPS with your ID and PW.

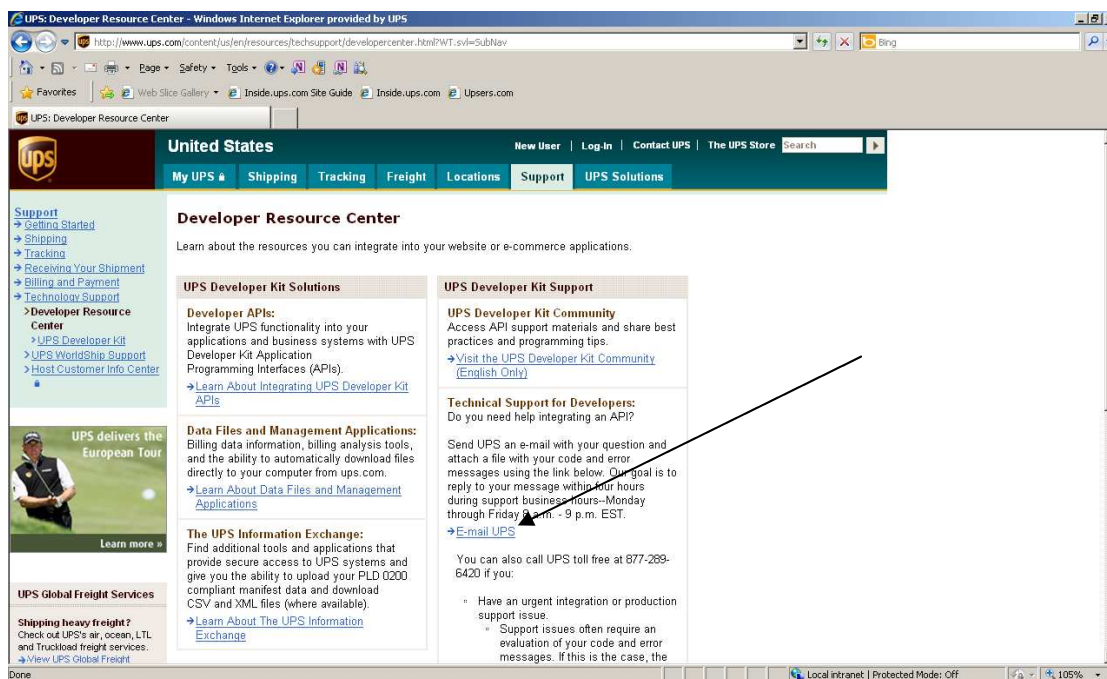

Hover over the “Support” tab, and select “Technology Support” from the drop-down.

From the Technology Support page select the Developer Resource Center link from the left navigation.

From the Developer Resource Center page select the “Email UPS” link in right hand column.

Complete Name, email address, Support Category must be “Technical Support”, and Support Topic must be “Developer Resource”. Select the “Next” button.

Appendix B - Shipping Error Codes

To discover errors, check the ResponseStatusCode element. A “1” normally indicates a successful response, whereas a “0” indicates an error, either Transient or Hard. When an error occurs there will also be an error code, and an error description.

- Success – Successful responses may or may not include **Warnings**.
 - (without warnings) Request is processed as anticipated by the client.
 - (with warnings) *Warning* messages indicate that UPS was able to process the request; however (potentially) unanticipated results have also occurred. The warning contains information in the response that should be passed to the end user.
- Errors – will return two different levels of severity.
 - *Transient* errors are temporary errors, due to temporary high server loads or scheduled maintenance, for example. The application may re-issue the request at a later time.
 - *Hard* errors indicate that an error existed in the request that UPS could not resolve. These errors are critical and prevent requests from processing.

Applications should not re-issue requests with Hard errors without first correcting the error. The following table lists the errors that UPS may return in response to a request.

Common Errors can apply to all Web Services and API;

Code	Severity	Description
10001	Hard	The XML document is not well formed
10002	Hard	The XML document is well formed but the document is not valid

126071	Hard	HazMat PackagingType is required.
126072	Hard	HazMat PackagingType exceeds maximum length of 255 characters.
126073	Hard	HazMat PackagingType violates datatype only ASCII allowed.

Error Code	Severity	Description
126076	Hard	Number of HazMat entities per package cannot be greater than 3.
126079	Hard	HazMat EmergencyContact Information is required for this shipment
126080	Hard	HazMat EmergencyContact Information exceeds maximum length of 35 characters.
126081	Hard	HazMat EmergencyContact Information violates datatype only ASCII allowed.
126082	Hard	Package HazMatPackageInformation AllPackedInOneIndicator is optional.
126083	Hard	Package HazMatPackageInformation OverpackedIndicator is optional.
126084	Hard	Package HazMatPackageInformation QValue must exist with RegulationSet IATA when AllPackedInOneIndicator present.
126085	Hard	HazMatPackageInformation QValue must be decimal value with one significant digit.
120444	Hard	Invalid Bill-To type
120026	Hard	Lift Gate Accessorial for Pick Up and Delivery are not allowed when both Hold For Pick Up and Drop off At UPS Facility is requested.
120027	Hard	Lift Gate for Pick Up accessorial is not allowed with Drop Off At UPS Facility accessorial.
120028	Hard	Lift Gate for Delivery accessorial is not allowed with Hold For Pick Up accessorial.
120029	Hard	World Wide Express Freight Shipment Service Option is not available for Return Shipments.
120030	Hard	Missing or Invalid Total Number of Pieces in all Pallets in a Shipment.
120031	Hard	Exceeds Total Number of allowed pieces per World Wide Express Shipment.
120032	Hard	The maximum dimensions for a pallet are ({0}) cm by ({1}) cm by ({2}) cm for the selected origin.
120033	Hard	The maximum dimensions for a pallet are ({0}) in by ({1}) in by ({2}) in for the selected origin.
120034	Hard	The maximum dimensions for a pallet are ({0}) cm by ({1}) cm by ({2}) cm for the selected destination.
120035	Hard	The maximum dimensions for a pallet are ({0}) in by ({1}) in by ({2}) in for the selected destination.
120036	Warning	Please contact customer service center for capacity authorization.
120037	Hard	Shipment total weight has exceeded the maximum shipment weight limit of 99,999.9 kgs or 99,999.9 pounds.
120041	Hard	The maximum per pallet weight for the selected service from the selected origin is ({0}) pounds.
120042	Hard	The maximum per pallet weight for the selected service from the selected origin is ({0}) kgs.
120043	Hard	The maximum per pallet weight for the selected service to the selected destination is ({0}) pounds.
120044	Hard	The maximum per pallet weight for the selected service to the selected destination is ({0}) kgs.
128255	Hard	Air Freight Packing List and Small Package Packing List are not allowed together in same shipment.
120062	Hard	The requested billing option is unavailable with the selected packaging.

Appendix C - Void Error Codes

To discover errors, check the `ResponseStatusCode` element. A “1” normally indicates a successful response, whereas a “0”

indicates an error, either Transient or Hard. When an error occurs there will also be an error code, and an error description.

- Success – Successful responses may or may not include **Warnings**.
 - (without warnings) Request is processed as anticipated by the client.
 - (with warnings) *Warning* messages indicate that UPS was able to process the request; however (potentially) unanticipated results have also occurred. The warning contains information in the response that should be passed to the end user.
- Errors – will return two different levels of severity.
 - *Transient* errors are temporary errors, due to temporary high server loads or scheduled maintenance, for example. The application may re-issue the request at a later time.
 - *Hard* errors indicate that an error existed in the request that UPS could not resolve. These errors are critical and prevent requests from processing.

Applications should not re-issue requests with hard errors without first correcting the error.

The following table lists the errors that UPS may return in response to a request.

Error Code	Severity	Description
10001	Hard	The XML document is not well formed
10002	Hard	The XML document is well formed but the document is not valid
190001	Transient	Void not available at this time
190002	Transient	Invalid/Missing registration ID
190100	Hard	Invalid ShipmentIdentificationNumber.
190101	Hard	Time for voiding has expired.
190102	Hard	No shipment found within the allowed void period
190103	Hard	The Pickup Request associated with this shipment has already been completed
190104	Hard	Return shipments cannot be voided.
190105	Hard	Pickup Cancellation is not Available on this Pickup Request
190106	Hard	Pickup Cancellation is not Available on this Pickup Request
190107	Hard	The Pickup Request associated with this shipment has previously been canceled
190108	Hard	The Pickup Request associated with this shipment cannot be canceled
190109	Hard	Invalid TrackingNumber
190110	Hard	Invalid Void Package {0}
190111	Hard	Package Void Limit Exceeded
190112	Hard	Return Service Shipments cannot be Voided at the Package Level
190113	Hard	International Shipments cannot be Voided at the Package Level
190114	Hard	Invalid Return Service Void Date
190115	Hard	Invalid Void Date

190116	Hard	A Label cannot be generated for a voided Return Service Shipment
190117	Hard	The Shipment has already been voided
190118	Hard	Same Day Service Void Not Allowed.
190119	Warning	The requested Void was successful, but the associated Pickup was not Cancelled
190121	Hard	None of the submitted packages were voided
190122	Hard	Package(s) {0} selected to void is(are) invalid
190124	Hard	Import Control Shipment cannot be voided later than 3 am of the day after the shipment uploaded.
190125	Hard	Import Control Shipments does not allow package void in a shipment

Appendix D - Label Recovery Error Codes

To discover errors, check the ResponseStatusCode element. A “1” normally indicates a successful response, whereas a “0” indicates an error, either Transient or Hard. When an error occurs there will also be an error code, and an error description.

Success – Successful responses may or may not include **Warnings**.

- (without warnings) Request is processed as anticipated by the client.
- (with warnings) *Warning* messages indicate that UPS was able to process the request; however (potentially) unanticipated results have also occurred. The warning contains information in the response that should be passed to the end user.

Errors – will return two different levels of severity.

- *Transient* errors are temporary errors, due to temporary high server loads or scheduled maintenance, for example. The application may re-issue the request at a later time.
- *Hard* errors indicate that an error existed in the request that UPS could not resolve. These errors are critical and prevent requests from processing.

Applications should not re-issue requests with Hard errors without first correcting the error. The following table lists the errors that UPS may return in response to a request.

Error Code	Severity	Description
10001	Hard	The XML document is not well formed
10002	Hard	The XML document is well formed but the document is not valid
20011	Hard	The Integration Indicator is no longer supported
300000	Transient	Label Recovery system is currently unavailable
300001	Hard	Multiple shipments found for the request
300002	Hard	Label is unavailable -- the package has been sent to the destination address
300003	Hard	The requested shipment contains more than 100 packages.
300004	Hard	Invalid shipments return service for label recovery
300005	Hard	Either tracking number or combination of reference plus shipper number required
300006	Hard	Label is unavailable -- the label is expired
300007	Hard	The shipment for the requested tracking number or the combination of reference number plus shipper number could not be found. Please check the submitted data or wait until the shipment is processed.
300008	Hard	Invalid Translate/code
300009	Hard	Invalid Inquire Method
300013	Hard	Invalid Label Print Method
300014	Hard	Invalid Tracking Number
300022	Warning	Email subsystem is currently unavailable
300023	Hard	Invalid LabelSpecification/HTTPUserAgent
300026	Warning	The Label Link Email has been sent to the original label delivery email address when the shipment was placed instead of the requested email address

Error Code	Severity	Description
300030	Hard	Invalid Reference Number
300031	Hard	Invalid Shipper Number
300032	Hard	Label is unavailable -- the shipment has no {0}
300033	Hard	The shipment for which you are trying to recover a label or Receipt has been voided. Please contact the vendor for further information
300034	Hard	Label is unavailable -- the shipment has not been processed.
300035	Hard	Too many shipments found with the requested Shipper Number and Reference Number. Please re-submit the request with the Tracking Number.

Appendix E - Common error codes for all webservice and API

Common Errors can apply to all web services;

Code	Severity	Description
10001	Hard	The XML document is not well formed
10002	Hard	The XML document is well formed but the document is not valid
10003	Hard	The XML document is either empty or null
10006	Hard	Although the document is well formed and valid, the element content contains values which do not conform to the rules and constraints contained in this specification
10013	Hard	The message is too large to be processed by the Application
20001	Transient	General process failure
20002	Hard	The specified service name, {0}, and version number, {1}, combination is invalid
20003	Hard	Please check the server environment for the proper J2EE ws apis
20006	Hard	Invalid request action
20012	Hard	The Client Information exceeds its Maximum Limit of {0}
250000	Hard	No XML declaration in the XML document
250001	Hard	Invalid Access License for the tool. Please re-license.
250002	Hard	Invalid UserId/Password
250003	Hard	Invalid Access License number
250004	Hard	Incorrect UserId or Password
250005	Hard	No Access and Authentication Credentials provided
250006	Hard	The maximum number of user access attempts was exceeded
250007	Hard	The UserId is currently locked out; please try again in 24 hours.
250009	Hard	License Number not found in the UPS database
250050	Transient	License system not available

Appendix F - Country Codes

UPS country code abbreviations generally follow the recommendations of the International Standards Organization, which publishes a list of currency abbreviations in ISO Standard 3166. The following table lists the ISO country codes that ISO had defined when this document was published. The latest information is available from the ISO web site.

Please note that not all UPS services are available in every country. For more information on UPS services, refer to the latest *UPS*

Rate and Service Guide available at <http://www.ups.com>.

Appendix G - Currency Codes

UPS currency code abbreviations generally follow the recommendations of the International Standards Organization, which publishes a list of currency abbreviations in ISO Standard 4217, for which the latest information is available from the ISO website. Exceptions are noted in bold in the table below.

Note that countries sometimes change their official currency. UPS may require some time after the introduction of a new currency before it can fully support that currency. In addition, UPS may continue to support the older currency for an interim period in order to provide backwards compatibility. UPS may also require the use of currencies other than the official currency for some countries. For the latest information, please contact your UPS Developer API representative.

Country/Region	Currency Name	Currency Code
Afghanistan	Afghani	AFN
Albania	Lek	ALL
Algeria	Algerian Dinar	DZD
American Samoa	US Dollar	USD
Andorra	Euro	EUR
Angola	Kwanza	AOA
Anguilla	East Caribbean Dollar	XCD
Antigua And Barbuda	East Caribbean Dollar	XCD
Argentina	Argentine Peso	ARS

Appendix I - Reference Number Codes

Shipments and packages may include a reference number. The type of reference number may be indicated by a reference number code. The following table lists the reference number code values.

Code	Description
AJ	Accounts Receivable Customer Account
AT	Appropriation Number
BM	Bill of Lading Number
9V	Collect on Delivery (COD) Number
ON	Dealer Order Number
DP	Department Number
3Q	Food and Drug Administration (FDA) Product Code
IK	Invoice Number
MK	Manifest Key Number
MJ	Model Number
PM	Part Number
PC	Production Code
PO	Purchase Order Number
RQ	Purchase Request Number
RZ	Return Authorization Number
SA	Salesperson Number
SE	Serial Number
ST	Store Number
TN	Transaction Reference Number
EI	Employer's ID Number
TJ	Federal Taxpayer ID No.
SY	Social Security Number

Appendix J - International Forms Preference Criteria

Preference criteria are required in North American Free Trade Agreement Certificate of Origin (NAFTA CO) documents. The following table lists the defined criteria and their use.

Criteria	Meaning
A	The good is \"wholly obtained or produced entirely\" in the territory of one or more of the NAFTA countries as referenced in Article 415. Note: The purchase of a good in the territory does not necessarily render it \"wholly obtained or produced.\" If the good is an agricultural good, see also criterion F and Annex 703.2. (Reference: Article 401(a) and 415)
B	The good is produced entirely in the territory of one or more of the NAFTA countries and satisfies the specific rule of origin, set out in Annex 401 that applies to its tariff classification. The rule may include a tariff classification change, regional value-content requirement, or a combination there-of. The good must also satisfy all other applicable requirements of Chapter Four. If the good is an agricultural good, see also criterion F and Annex 703.2. (Reference: Article 401(b))
C	The good is produced entirely in the territory of one or more of the NAFTA countries exclusively from originating materials. Under this criterion, one or more of the materials may not fall within the definition of \"wholly produced or obtained,\" as set out in Article 415. All materials used in the production of the good must qualify as \"originating\" by meeting the rules of Article 401(a) through (d). If the good is an agricultural good, see also criterion F and Annex 703.2. Reference: Article 401(c).
D	Goods are produced in the territory of one or more of the NAFTA countries but do not meet the applicable rule of origin, set out in is an agricultural good, see also criterion F and Annex 703.2. Reference: Article 401(c). Annex 401, because certain non-originating materials do not undergo the required change in tariff classification. The goods do nonetheless meet the regional value-content requirement specified in Article 401 (d). This criterion is limited to the following two circumstances: (1) The good was imported into the territory of a NAFTA country in an unassembled or disassembled form but was classified as an assembled good, pursuant to H.S. General Rule of Interpretation 2(a). or (2). The good incorporated one or more non- originating materials, provided for as parts under the H.S., which could not undergo a change in tariff classification because the originating materials, provided for as parts under the H.S., which could not undergo a change in tariff classification because the heading provided for both the good and its parts and was not further subdivided into subheadings, or the subheading provided for both the good and its parts and was not further subdivided. Note: This criterion does not apply to Chapters 61 through 63 of the H.S. (Reference: Article 401(d))
E	Certain automatic data processing goods and their parts, specified in Annex 308.1, that do not originate in the territory are considered originating upon importation into the territory of a NAFTA country from the territory of another NAFTA country when the most-favored- nation tariff rate of the good conforms to the rate established in Annex 308.1 and is common to all NAFTA countries. (Reference: Annex 308.1)

Criteria	Meaning
F	<p>The good is an originating agricultural good under preference criterion A, B, or C above and is not subject to a quantitative restriction in the importing NAFTA country because it is a \"qualifying good\" as defined in Annex 703.2, Section A or B (please specify). A good listed in Appendix 703.2B.7 is also exempt from quantitative restrictions and is eligible for NAFTA preferential tariff treatment if it meets the definition of \"qualifying good\" in Section A of Annex 703.2. Note: This criterion does not apply to goods that wholly originate in Canada or the United States and are imported into either country. Note: A tariff rate quota is not a quantitative restriction</p>

Appendix K - Hong Kong District Codes

The following table lists the codes UPS uses to represent Hong Kong districts.

Code	District

Appendix L - Export License Exception Codes

License exception codes may be used in lieu of an export license in Shipper Export Declaration (SED) forms. The following table lists the defined export codes.

Code	License Exception
AGR	Established for agricultural commodities to permit exports and re-exports to Cuba that is not specifically identified on the Commerce Control List (CCL) and is classified as EAR99.
APR	Items for export or re-export not controlled for nuclear nonproliferation, missile technology or crime control.
AVS	U.S. aircraft or foreign sojourn into foreign country.
BAG	Individual or exporting carriers crew members baggage.
CIV	National security items for civil end users.
CTP	Computer and parts of.
ENC	Encrypted software and hardware - financial institutions.
GBS	Export or re-export of Country Group B; controlled for national security reasons.
GFT	Gift shipments; packages to individuals, religious, charitable or education institutions, donations of basic needs.
GOV	Government shipments, covers shipments for U.S. government agencies, personnel or of cooperating foreign governments
KMI	Encrypted software and hardware.
LVS	Value of shipments limited.
NLR	No license required.
RPL	Servicing and replacement of parts and equipment, one for one replacement parts service or replacement of equipment.
TMP	Temporary exports, export and re-export of items temporary in U.S., export and re-export of beta test software.
TSPA	Software or technology outside the scope of export regulations.
TSR	Technology and software, national security reason, Country Group B.
TSU	Technology and software shipments, of basic requirements, data supporting prospective or actual bids, offers to sell, lease or supply an item. Software update for fixing programs, mass marketed software.

Appendix M - Sample Shipping and Return Labels

The following figures are examples of UPS shipping and return labels.

Figure 1. Sample Shipping Label

Figure2. Sample Return Label

Appendix N - Shipping and Tracking Numbers for Testing

UPS has set aside several shipping identification and tracking numbers to help developers test their applications. These special numbers are only valid with the Customer Integration Environment at wwwcie.ups.com. The following table lists those special numbers and describes the results that developers should expect **when attempting a VoidShipmentRequest**. For each test case, the first number listed is a shipment identification number; additional numbers, if present, are tracking numbers.

Note that only these numbers may be used in the Customer Integration Environment when voiding shipments.

NUMBER(S)	EXPECTED RESULT
1ZISDE016691676846	A successful XML response will be returned for a shipment level void request.
1Z2220060290602143	A successful XML response will be returned for a shipment level void request.
1Z2220060294314162 and Tracking Number 1Z2220060291994175	A successful XML response will be returned for a package level void request. The request will void the package in the shipment.
1Z2220060292690189 and Tracking Number 1Z2220060292002190	A successful XML response will be returned for a package level void request. The request will void the package in the shipment.
1ZISDE016691609089 with Tracking Numbers 1ZISDE016694068891 and 1ZISDE016690889305	A successful XML response will be returned for a package level void request. The request will void all the packages
1Z2220060290530202 with Tracking Number 1Z2220060293874210 and 1Z2220060292634221	A successful XML response will be returned with a partial void for a package level void request. The request will void package 1Z2220060293874210 but package 1Z2220060292634221 cannot be voided.

Appendix S- License exception code possible values: Shipping API – Package

Value	Description
AGR	Established for agricultural commodities to permit exports and re-exports to Cuba that is not specifically identified on the Commerce Control List (CCL) and is classified as EAR99.
APR	Items for export or re-export not controlled for nuclear nonproliferation, missile technology or crime control.
AVS	U.S. aircraft or foreign sojourn into foreign country.
BAG	Individual or exporting carrier's crew member's baggage.
CIV	National security items for civil end users.
CTP	Computer and parts of.
ENC	Encrypted software and hardware - financial institutions.
GBS	Export or re-export of Country Group B; controlled for national security reasons.
GFT	Gift shipments; packages to individuals, religious, charitable or education institutions, donations of basic needs.
GOV	Government shipments, covers shipments for U.S. government agencies, personnel or of cooperating foreign governments.
KMI	Encrypted software and hardware.
LVS	Value of shipments limited.
NLR	No license required.
RPL	Servicing and replacement of parts and equipment, one for one replacement parts service or replacement of equipment.
TMP	Temporary exports, export and re-export of items temporary in U.S., export and re-export of beta test software.
TSPA	Software or technology outside the scope of export regulations.
TSR	Technology and software, national security reason, Country Group B.
TSU	Technology and software shipments, of basic requirements, data supporting prospective or actual bids, offers to sell, lease or supply an item. Software update for fixing programs, mass marketed software.

Appendix T - Frequently Asked Questions: Shipping API – Package

API	Category	Question	Answer
Shipping	Account Based Rates (ABR) or Negotiated Rates	Do the Developer APIs support ABR also known as Negotiated Rates?	Yes. Shipping and Rating APIs both XML & Web Services support Negotiated Rates
Shipping	Negotiated Rates	How do get access to negotiated Package rates?	To streamline your ability to view your negotiated rates through the [Shipping/Rating] API UPS has implemented a new process that no longer requires you to wait for a UPS Sales Person to activate your account. Simply add a UPS Account to your myUPS ID Account Summary as you previously would and your account will be activated within 48 hours for negotiated rates provided you have a contract with UPS. Remember to select the “Negotiated Rates Indicator” within the XML Request to have your negotiated rates returned within the response.
Shipping	Negotiated Rates	What flags are needed to return Negotiated rates in the request	Use the NegotiatedRatesIndicator within the API request to view your Negotiated rates and the customer was set up by their UPS Account Rep for negotiated (Account Base rates).
Shipping	Ground Freight Pricing (GFP)	Are dimensions required for GFP	Currently dimensions are not applicable to Ground Freight Pricing
Shipping	Duty & Taxes	How do you bill a 3 rd Party for Duty & Taxes?	In order to bill a 3 rd Party for D&T, use the noted tags in your request: <pre> <ItemizedPaymentInformation> <ShipmentCharge> <Type>01</Type> <BillShipper> <AccountNumber>XXXXXX</AccountNumber> </BillShipper> </ShipmentCharge> <ShipmentCharge> <Type>02</Type> <BillThirdParty> <BillThirdPartyConsignee> <AccountNumber>XXXXXX</AccountNumber> <ThirdParty> <Address> <PostalCode>XXXXX</PostalCode> <CountryCode>XX</CountryCode> </Address> </ThirdParty> </BillThirdPartyConsignee> </BillThirdParty> </ShipmentCharge> </ItemizedPaymentInformation> </pre>

API	Category	Question	Answer
Shipping	Scan-based Billing	Does the Shipping API support Scan-Based Billing	Yes, it is supported by default meaning if they are not tendered to UPS they are not billed.
Shipping	Third Party/Freight Collect Shipment	Does the Ship API validate account numbers when shipping Third Party and Freight Collect?	Yes, it validates if the account is active, valid for Manage Inbound charges and the postal code of the account billed
Shipping	Address Validation	How do I turn off validation of addresses with the Shipping API?	The value within the "ShipmentRequest/Request/RequestOption" tag of the request needs to be "nonvalidate".
Shipping	Address Validation	Will the Shipping API provide validation for Japanese addresses with City and Country and no zip code?	No, the postal code must be included for validation.
Shipping	Address Validation	What validation is the Shipping API using to validate addresses for US and International addresses?	Shipping API does not do ANY address validation at the street level. Only regional validation; city, state, country (postal code optional).
Shipping	Rural & Super Rural	Does the Shipping API - Package return Rural and Super Rural charges?	Yes the Shipping API will return rural and super rural charges. These charges will automatically be applied to the transportation charge portion of the rate
Shipping	UPS Account	How do I add a UPS account to myUPS ID account summary? It is stating that I have to have an invoice # and control ID.	As a means of securing customer information, when adding an account to their My UPS profile or enroll for electronic billing options or Quantum View, customers are currently prompted to authenticate their account by entering an invoice number, invoice amount, and the invoice date from one of their last three billing cycles along with the Control ID printed just below the shipper number on their invoice. This provides an additional layer of security to protect our customer's information. The Control ID is currently included in the following U.S. and Canada Invoice Media types:• Online PDF Images• EDI Domestic and Import• Hard Copy Invoices
Shipping	International Commodities	Is there a limit of the number of line	Yes, when using international forms only 50 line items (commodities) can be associated per shipment using the Shipping

API	Category	Question	Answer
		items for the Commercial Invoice?	API.
Shipping	HazMat - Dry Ice	Does the Shipping API for Package support the Dry Ice indicator?	Yes, effective with the July 2011 release, the Shipping API will support Dry Ice, as long as; it does not include any other Hazmat materials in the shipment and meets the requirements. Please refer to UPS.com for more information.
Shipping	99 Account Number Limitation	How do I associate more than 99 account numbers for use with the Shipping APIs?	99 accounts is currently the maximum number available. If the user has more than 99 accounts they must be spread across multiple UserIds.
Shipping	Proactive Response	Is Proactive Response Supported?	No, the Shipping API does not support Proactive Response
Shipping	Delivery Intercept	Is UPS Delivery Intercept available through the Shipping API?	No, it is not currently supported.
Shipping	Shipper Release	Is Shipper Release available with the Shipping API?	Yes.
Shipping	Resi/Comm Indicator	Does the Shipping API classify addresses as residential or commercial?	The Shipping API will classify an address based on UPS' history for that address and the appropriate rate will be returned in the response
Shipping	Returns	Is there a URL ONLY capability for returns within the Shipping API?	No.
Shipping	Returns	Can a Return be voided? If yes, what is the cutoff timing to void a return?	<p>A customer can void an RS label up to 2am/3am Eastern Time the following night (e.g. Monday request, Tuesday 2am/3am void cutoff). This is based on when our batch process starts sending RS1/RS3 labels to the centers. After the cutoff, the customer will not be able to void, and the UPS agent is also not able to void. If the void is completed by the cutoff time then the customer will not be charged.</p> <p>For ERL and PRL, the labels can be voided up to 30 days after generation. Please note that the Label generation fee, if applied is not voidable and that unused labels will not be billed transportation charges.</p>
Shipping	Returns	Does the Shipping API support international returns and returns	Yes. Please see the UPS Developer's Guide for the specific countries supported

API	Category	Question	Answer
		in international countries where the Shipping API is supported?	
Shipping	Print Return Labels	For the print return label option, if a Yahoo merchant needs to reprint the return label, how much time does he have? Is it 10 days after the initial request?	UPS does not provide a mechanism to "reprint" a Print Return Label (PRL) the vendor must save the label locally if they wish to reprint. Only the ERL (Electronic Return Label) option provides that capability.
Shipping	UPS Return Labels	Does UPS charge the accessorial fee for a return label when using the API?	Yes, the customer will be charged the accessorial fee once they request a return label.
Shipping	Returns	Does the Shipping API - Package support Returns capabilities?	Yes.
Shipping	Electronic Return Label Days Available	Does the customer have to utilize the label recovery capability within the Ship API to reprint an electronic return label? Either way, how many days is the label available to reprint?	Yes, effective with the July 2010 Release, the time limit for retrieving an Electronic Return Label has been extended to 30 days. The prior limit was 10 days. This is noted in the latest Shipping Developers Guide. An Electronic Return Label is specified by using Shipment/ReturnService/Code "8" in the Shipment Confirm Request. The ERL email will contain a link to the label so the recipient can print the label to attach to a package.
Shipping	Returns	Are the Returns capabilities the same within the Web Service versus XML versions of the Shipping API - Package?	Yes. The Returns capabilities are the same.

API	Category	Question	Answer
Shipping	128 Reference Number Barcode	Can the Shipping API - Package generate a 128 Reference number barcode below the 1Z? Can it generate a PDF417 Reference number barcode below the 1Z?	Yes. A 128 Reference number barcode can be generated below the 1z number, as the Shipping API can print a barcode in reference field 1. The Shipping API - Package does not create a PDF417 as they are not required. The purpose of the PDF417 was as a backup in case the PLD did not transmit from a shipping system. That is not possible with the Shipping API - Package because a label is only returned after the receipt of PLD.
Shipping	Currency Conversion	Does the Shipping API - Package support conversion of Japanese Yen to US Dollars?	No. The Shipping API - Package does not support currency conversions.
Shipping	From Suite/Apt# on Label	How does a customer include the Suite/Apt# within "From" address on the label returned for the Shipping API - Package?	The customer needs to include the suite/apt # in delivery address lines 2 or 3 within the request.
Shipping	High Value Report	How does the Shipping API - Package work with High Values? Does the paperwork comeback as a GIF image and get printed on a thermal printer? Or, does the customer need to produce these themselves?	The High Value Report is returned in the response in one of the supported formats specified by the developer. In each case it will be a Base64 encoded file that must be decoded and printed. 2 copies should be printed, both will be signed by the driver and the driver will leave one copy as a receipt. The file, once decoded is a simple HTML file that can be printed locally

API	Category	Question	Answer
Shipping	Pickup request	Can a Pickup be requested through the Shipping API - Package?	<p>No. All pickup requests must be made through the Pickup web service. Details are available at the Developer resource center on ups.com at: https://www.ups.com/upsdeveloperkit.</p> <p>For customers who implemented the Shipping API - Package prior to January 2010 can continue to request a pickup through the Shipping API as part of their shipping request. Please note the billing of pickups changed in January 2010 and the customer will be charged for each request regardless of the service type shipped. Please review the Rate & Service Guide for more details about pickup charges and services.</p>
Shipping	Label/Receipt	Does the Shipping API - Package provide a label and receipt but does not email a receipt for the user nor provide a confirmation number?	The output of the Shipping API is a label. There is no receipt provided. In addition, Ship API only provides the ability to have the label emailed with the ERL (Electronic Return Label) service and not for forward shipments
Shipping	Commercial Invoice	Can a API customer export shipments to print a copy of the commercial invoice after the fact?	The API will return a commercial invoice as part of the response file. Therefore, the customer must save the image from the response file to retrieve it later. If they didn't save the response then the API does not store it for retrieval.
Shipping	Reprinting Labels	Can a customer using the Shipping API reprint a label?	No, at this time the Shipping API does not provide the ability to reprint labels.
Shipping	Oracle	Are there any known issues with implementing Oracle with the Shipping API - Package?	UPS is not aware of any issues customers have implementing the Shipping API - Package using Oracle at this time. The UPS Developer APIs are designed so that they can be implemented in almost any environment as long as the customer application can open a secure connection of SSL and perform an HTTP Post.
Shipping	Trade Direct	Does the Shipping API support Trade Direct?	No, the Shipping API does not support Trade Direct shipments.

API	Category	Question	Answer
Shipping	Paperless Invoice	Does the Shipping API - Package support Paperless Invoice?	Yes. The developer guide for the Shipping API - Package lists the valid countries for paperless invoice. See the AdditionalDocumentIndicator Element within the Interface Spec within the developer guide. Once the shipment is processed an EDI (paperless invoice) or EDI PULL (paperless invoice and additional export document indicator) will appear on the bottom right corner of the label image returned in the ShipAcceptResponse label digest. This indicates that Paperless Invoicing has been requested.
Shipping	Paperless Invoice voids	Can a Paperless Invoice shipment be voided through the Shipping API - Package? If yes, what happens to the invoice information?	Yes a Paperless Invoice shipment can be voided via the Shipping API - Package. If a shipment is voided and consequently the package is never tendered to UPS, then the paperless invoice data that was uploaded with the shipment is not used to create an invoice image and it is eventually purged.
Shipping	Paperless Invoice Shipment	How does Paperless Invoice work in terms of the documentation being forwarded?	Those customers setup for paperless invoicing shipping internationally to a paperless supported country with the necessary data for paperless will have the invoice automatically sent to brokerage.
Shipping	Paperless Invoice Conditions	What are the pre-conditions required for a customer to be set up on Paperless Invoice?	<p>The process to support Paperless Invoice using the Shipping API are listed below:</p> <ol style="list-style-type: none"> 1. The Sold To country must be the same as the Ship To country. 2. The customer must have a paperless invoice contract and be set up in UPS back end systems. (The UPS Account Manager should set this up.) 3. The shipment is a non-document package forward shipment requiring a commercial invoice. 4. The destination country is a valid paperless invoice destination. (A list of those destinations is available in the Developer's Guide.) 5. If additional export documents are required for the movement, the customer must specify an <AdditionalDocumentIndicator/> in the XML request. <p>If the above conditions have been met an EDI (paperless invoice) or EDI PULL (paperless invoice and additional export document indicator) will appear on the bottom right corner of the label which is returned in the ShipAcceptResponse XML. This indicates that Paperless Invoicing has been requested.</p> <p>To implement paperless invoicing an <InternationalForms> container must be present in the XML to provide the information necessary to replace a paper invoice with a paperless (electronic) invoice. There is a section devoted to International Forms in the Developer's Guide which provides the XML structure for Certificate of Origin (CO), Invoice, North American Free Trade Agreement Certificate of Origin (NAFTA CO), or Shipper's Export Declaration (SED) as appropriate. The shipper needs to add the container along with the necessary international forms information</p>

API	Category	Question	Answer
			for the shipment.
Shipping	Ref Number 1 - Text Values on Label	Can a customer implementing the Shipping API - Package "rename" reference value one through the API	No, The reference field descriptions cannot be modified at this time. You must use one of the values provided in the Developer's Guide.
Shipping	Batch Processing	Does the Shipping API support Batch?	No, the Shipping API only supports transactional requests.
Shipping	Resi/Comm Indicator	How do you indicate the "Ship TO" as residential?	Use the ResidentialAddress element outlined within the Shipping API - Package developer guide.
Shipping	Voids	How are voids processed?	For forward and return movements send a VoidShipmentRequest element and UPS will return a VoidShipmentResponse. Forward movements must be voided within 28 days of creating the label. Return shipments must be voided within 24 hours.
Shipping	Tracking Numbers	Can a customer create their own tracking numbers using the Shipping API - Package?	No...a customer cannot create their own tracking numbers using the Shipping API - Package. The tracking numbers will be automatically created and returned in the response
Shipping	UPS World Ease	Does the Shipping API - Package support UPS World Ease?	No...the Shipping API - Package does not support UPS World Ease at this time.
Shipping	International Forms	Does the Shipping API - Package support international forms?	Yes.
Shipping	Shipper's Export Declaration (SED)	Does the customer has to complete their SED filing or is there an option for UPS to do that for the customer via the Shipping API?	Yes, the customer has to complete their own filing and you can identify it has been filed in your request but the Shipping API does not provide an option UPS to file a customer's SED.

API	Category	Question	Answer
Shipping	Label	Does the Web Services version of the Shipping API - Package behave differently in rendering a label than the XML version of the Shipping API - Package?	The Web Services Shipping API - Package behaves similarly as the XML Shipping API - Package in that the label elements returned in the Shipment Accept response consist of two parts, both of which are base64 encoded data which must be decoded. Part one consists of the label image and part two contains the HTML which is used to properly size the label image in a browser for display and printing. When the two parts are combined they form a unit which will satisfy the requirements for printing a proper label to apply to a package. This ensures the label will meet the standards necessary for UPS to scan and process the label within the shipping system.
Shipping	Maximum Packages within a shipment	Is there a difference between the Shipping API - Package Web Service versus XML versions in the number of packages that can be included within a forward movement?	There is no difference between the Shipping XML API and Web Service API regarding the maximum number of packages allowed for forward movements. The Web Service Developer Guide indicates 200 is the maximum.
Shipping	CWT and Shipping API	Is there a solution using the ship API (or other solution) that would prompt UPS billing or PLD upload or other to aggregate single piece packages into hundredweight pricing (shipment) after the package has been processed?	No, there is no solution in place for the Ship API. In order to obtain the CWT price with the Ship API, the pkgs. would have to be processed as one shipment, the UserId being used must be ABR enabled and you must include the <NegotiatedRatesIndicator> tags to receive the Hundredweight rates.

API	Category	Question	Answer
Shipping	Reference Number Rules	What does the Shipping API - Package support in terms of Reference Numbers?	<p>Supports Two Shipment Level Reference Numbers or two package level reference numbers You cannot use the Shipment Level and Package Level Reference numbers at the same time within a SHIP API shipment.</p> <p>Shipment Level Reference Numbers are only allowed for shipments that are not US to US (origin\destination) or PR to PR (origin\destination)</p> <p>Package Level Reference Numbers are only allowed for shipments that are US to US (origin\destination) or PR to PR (origin\destination).</p> <p>Reference Number Propagation</p> <p>1. In a Ship API Shipment, if there is no Package Level. Ref# on the 1st package of the shipment, the Shipment Level. Reference number(s) will be propagated to all packages.</p> <p>Reference Number Propagation</p> <p>In a Ship API Shipment, if there is no Shipment level reference number and there is Package Level. Reference number on the 1st package, the 1st package's reference number will be propagated up to the Shipment Level.</p>
Shipping	Labeling	Does the Shipping API support ASC BIO labels like WorldShip does?	The Ship API does not support ASC BIO on the label it is a contract service that is not supported by the Shipping
Shipping	Label Reference Number	Can any of the reference fields be blocked from printing on the label through a Shipping API?	At this time we are unaware of a facility which suppresses reference number printing on the label when they are included in the shipment data. However, please note that reference numbers are not required and may be omitted if there is no need for them.
Shipping	Certification	What is required to certify for the Shipping API - Package?	Please review the Customer Integration Environment section of UPS Developer's Guide for certification requirements. Essentially UPS needs to see the source XML and copies of your labels to certify you.
Shipping	Signature Required	Does the Shipping API - Package support Signature Required service?	Yes.
Shipping	Future Date Shipping	Is there a future date shipping capability within the Shipping API - Package?	No. We do not support future date shipping. All packages are considered tendered on the date of their transaction.

API	Category	Question	Answer
Shipping	Security for Credit cards	Please describe the security on the UPS web server? Is the credit card information submitted over an encrypted (secure) connection?	Yes, we use 128 bit encryption for all aspects of the APIs. In addition credit card information is “tokenized” once we receive it, so we never store it in plain text
All	General - security	Does UPS support chained or unchained digital certificates?	Yes, we support chained digital certificates.
All	API availability	Within what countries are the Developer APIs available?	The Developer APIs are available in the countries listed at ups.com by API and by country under the UPS Developer Resource center located at: https://www.ups.com/upsdeveloperkit
All	Mail Innovations	Is Mail Innovations available within any of the Developer APIs?	No, Mail Innovations is not available within a Developer API.
All	UPS Logos High Resolution	How do I get access to higher resolution logos than what are available within the downloads for the UPS Developer Kit - Developer APIs?	Customers are not routinely provided these UPS shield graphics without having a design/layout submitted to UPS Brand Management for approval. The customer needs to visit: https://www.upsbrandexchange.com/brandHome.awsp This site will take them through the process for downloading a limited set of sample images for layout, and how to secure an approval for customer use, as well as the high-resolution graphics.
All	Technical Support email form	Is XPCI a required field within the email support form?	No. it is not required.
All	Technical Support	How do I get technical support for the APIs at ups.com?	Go to the Developer Resource Center and select email support under the UPS Developer Kit Support Column (link noted): http://www.ups.com/content/us/en/resources/techsupport/developercenter.html
All	Characters	Can Japanese Kanji character be recognized by UPS Developer APIs?	No.
All	Basic	Do any of the Developer APIs support Basic service?	No. Basic is not supported within the Shipping API.

API	Category	Question	Answer
All	ASMX	Are the Web Services versions of the APIs ASMX based?	No. All Web Services are XML based. This is described in the section 'UPS Developer Kit Technologies' of every developer's guide
All	Pointing to the wrong URL for API	I keep getting, "XML document is well formed but the document is not valid." error message. What am I doing wrong?	<p>The "XML document is well formed but the document is not valid" error message is generally returned when an element in the XML request does not adhere to the formatting defined within the Xpath section of that API's developer guide. When the API returns this error it indicates the field which is not valid in the ErrorLocationElementName element in the XML response. When we test the XML provided by you earlier in this email chain we are able to receive a successful response.</p> <p>Most likely you may be posting to an incorrect URL. The error message returned from the API should have contained a line similar to the following:</p> <pre><ErrorLocationElementName>XPATh TO FIRST ELEMENT WHERE XML DOESN'T MATCH EXPECTED FORMAT</ErrorLocationElementName></pre>
All	Phone Support	Is phone support provided for the UPS Developer Kit - Developer APIs? If so, what is the number and what are the hours of operation?	<p>Yes. Phone support is provided for basic API questions. This includes integration questions and production questions. However, customer's questions that cannot be answered verbally will be directed to the email support form at ups.com.</p> <p>Phone Support Hours: M-F 730am- 9pm EST Sa-Su 9am - 6pm EST 800-247-9035</p>
All	Examples of API Implementations	Are there any examples of implementations that we can review to understand how best to utilize the APIs?	No, we do not provide implementation examples.
All	Code languages supported	Do the APIs support PHP or Perl with code sample within the Developer Guides or the developer kit zip files?	Yes, We currently support PHP or Perl with sample code.
All	Password changes	Are there new login password requirements?	<p>Yes, for new or updated passwords the following rules apply:</p> <ul style="list-style-type: none"> • Must be 8 to 26 characters long • Must include 3 of the following categories: <ul style="list-style-type: none"> ○ Lowercase letter ○ Uppercase letter ○ Number

API	Category	Question	Answer
			<ul style="list-style-type: none">○ Special character (#, %, @,*)○ Space• Must not contain any of the following information:<ul style="list-style-type: none">○ User ID○ Name○ E-mail address <p>Note: (must be at least 8 characters), at the minimum it must also include upper and lower case letters and a number.</p> <p>For example: PaSSword22</p>
